# PRICE SCHEUDLE OF RATES I - BUILDING WORKS

# 1. EXCAVATE

| S/No | Description                                                                                                                                                                                                                                                                                      | Unit | Unit Cost (\$) |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| EX.1 | Clear level or sloping site of tall grass, shrubs, bushes, undergrowth, etc. and small trees not exceeding 600 mm girth at a height of 1 metre above ground and grub up their roots and fill voids with earth obtained from Contractor's own sources and disposal of materials off site.         | sq m | 1.36           |
| EX.2 | Excavate surface to reduce level not exceeding 100 mm deep to average depth, get out, remove, deposit, spread, level and mechanically ram and consolidate on site or remove off site to a dump as directed by the University or deposit at contractor's own dumping ground.                      | sq m | 1.7            |
| EX.3 | Excavate surface to reduce level exceeding 100 mm and not exceeding 200mm deep to average depth, get out, remove, deposit, spread, level and mechanically ram and consolidate on site or remove off site to a dump as directed by the University or deposit at contractor's own dumping ground.  | sq m | 1.87           |
| EX.4 | Excavate surface to reduce level exceeding 200 mm and not exceeding 300mm deep to average depth, get out, remove, deposit, spread, level and mechanically ram and consolidate on site or remove off site to a dump as directed by the University or deposit at contractor's own dumping ground.  | sq m | 2.81           |
| EX.5 | Excavate surface to reduce level exceeding 300 mm and not exceeding 1000mm deep to average depth, get out, remove, deposit, spread, level and mechanically ram and consolidate on site or remove off site to a dump as directed by the University or deposit at contractor's own dumping ground. | cu m | 6.97           |
| EX.6 | Add for items 2 to 5 each additional 2.00 m in depth beyond the first 1.00m deep.                                                                                                                                                                                                                | cu m | 2.93           |
| EX.7 | Add for excavating by hand for which mechanical means is not possible for quantity which is less than 250 cu m in any single operation or for any other reason the use of mechanical plant is not possible for level n.e. 100 mm deep.                                                           | sq m | 1.19           |
| EX.8 | Add for excavating by hand for which mechanical means is not possible for quantity which is less than 250 cu m in any single operation or for any other reason the use of mechanical plant is not possible for level exceeding 100mm & n.e. 200mm deep.                                          | sq m | 1.45           |
| EX.9 | Add for excavating by hand for which mechanical means is not possible for quantity which is less than 250 cu m in any single operation or for any other reason the use of mechanical plant is not possible for level exceeding 200mm & n.e. 300mm deep.                                          | sq m | 2.38           |

| EX.10 | Add for excavating by hand for which mechanical means is not possible for quantity which is less than 250 cu m in any single operation or for any other reason the use of mechanical plant is not possible for level exceeding 300mm & n.e. 1000 mm deep.                  | cu m | 12.75 |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|
| EX.11 | Excavate in slopes or embankment and get out, remove, deposit, spread and level on Site and/or remove to ENV's approved dumping ground including trimming surfaces of slopes.                                                                                              | cu m | 12.75 |
| EX.12 | Roll with power roller not exceeding one tonne or with approved hand roller.                                                                                                                                                                                               | sq m | 0.6   |
| EX.13 | Trim undulating ground to form level surface or embankments or to required falls.                                                                                                                                                                                          | sq m | 1.11  |
| EX.14 | Excavate trenches for surface water channels and drains not exceeding 525 mm width to an average depth not exceeding 750 mm, get out, backfill, remove surplus excavated materials off site and make good (length measured over sump pits)                                 | m    | 6.89  |
| EX.15 | Excavate to form trenches for foundations, drains, culverts retaining walls, etc. not exceeding 2.00m deep and get out, part return, fill in and ram and remainder remove and deposit, spread and level on Site and/or remove to ENV's dumping ground.                     | cu m | 12.75 |
| EX.16 | Excavate to form trenches for foundations, drains, culverts retaining walls, etc. exceeding 2.00m and not exceeding 4.00m deep and get out, part return, fill in and ram and remainder remove and deposit, spread and level on Site and/or remove to ENV's dumping ground. | cu m | 15.3  |
| EX.17 | Excavate to form trenches for foundations, drains, culverts retaining walls, etc. exceeding 4.00m and not exceeding 6.00m deep and get out, part return, fill in and ram and remainder remove and deposit, spread and level on Site and/or remove to ENV's dumping ground. | cu m | 38.12 |
| EX.18 | Excavate to form trenches for foundations, drains, culverts retaining walls, etc. exceeding 6.00m deep and get out, part return, fill in and ram and remainder remove and deposit, spread and level on Site and/or remove to ENV's dumping ground.                         | cu m | 47.9  |
| EX.19 | Excavate for pier holes and the like not exceeding 1 cu m each and get out, remove, deposit, spread and level on site and/or remove to ENV's approved dumping ground.                                                                                                      | no   | 19.55 |

| EX.20 | Extra over for excavating trenches in semi-hard ground not exceeding 2.00m deep.                                                                                                              | cu m | 22.02 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|
| EX.21 | Extra over for excavating trenches in semi-hard ground exceeding 2.00m & not exceeding 4.00m deep.                                                                                            | cu m | 27.88 |
| EX.22 | Extra over for excavating trenches in semi-hard ground exceeding 2.00m & not exceeding 6.00m deep.                                                                                            | cu m | 57.21 |
| EX.23 | Extra over for excavating trenches in semi-hard ground exceeding 6.00m deep.                                                                                                                  | cu m | 71.83 |
| EX.24 | Extra over for excavating pier holes in semi-hard ground.                                                                                                                                     | cu m | 29.33 |
| EX.25 | Extra over excavation for excavating trenches in hard ground not exceeding 2.00m deep (blasting will not be permitted. Work has to be carried out by pneumatic tools, etc.).                  | cu m | 27.88 |
| EX.26 | Extra over excavation for excavating trenches in hard ground exceeding 2.00m & not exceeding 4.00m deep(blasting will not be permitted. Work has to be carried out by pneumatic tools, etc.). | cu m | 35.28 |
| EX.27 | Extra over excavation for excavating trenches in hard ground exceeding 4.00m & not exceeding 6.00m deep(blasting will not be permitted. Work has to be carried out by pneumatic tools, etc.). | cu m | 72.42 |
| EX.28 | Extra over excavation for excavating trenches in hard ground exceeding 6.00m deep(blasting will not be permitted. Work has to be carried out by pneumatic tools, etc.).                       | cu m | 91.04 |
| EX.29 | Extra over excavation for excavating pier holes in hard ground (blasting will not be permitted. Work has to be carried out by pneumatic tools, etc.).                                         | no   | 37.15 |

| EX.30 | Excavate pits, small holes, etc (i.e. holes not exceeding 1cu m) to receive bases of posts etc, get out, backfill, remove surplus excavated materials off site and make good.                                                                                                                                     | no   | 18.28 |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|
| EX.31 | Timber left in excavation as directed including cutting runners below ground level (price to include wedges, cleats, etc.).                                                                                                                                                                                       | sqm  | 11.22 |
| EX.32 | Backfill and ram best of excavated material around foundations in 150 mm layers.                                                                                                                                                                                                                                  | cu m | 6.04  |
| EX.33 | Remove excavated material to a dump within site as directed by the University irrespective of distance.                                                                                                                                                                                                           | cu m | 7.06  |
| EX.34 | Remove excavated material to a dump off site as directed by the University irrespective of distance.                                                                                                                                                                                                              | cu m | 37.91 |
| EX.35 | Dry approved earth filling obtained from the Contractor's own sources, deposited, spread and consolidated by hand or mechanical means in layers of 300 mm and as directed to make up levels or banks.                                                                                                             | cu m | 7.91  |
| EX.36 | Dry approved earth filling obtained from the Contractor's own sources, in filling to slipped banks including taking out loose, muddy soil and all necessary hand or mechanical ramming as directed.                                                                                                               | cu m | 13.18 |
| EX.37 | Take out silt, loose muddy soil or other materials from existing running storewater channels, drains exceeding 150 mm deep, sump pits or cesspits and remove, deposit, spread and level in positions as directed by the University or remove off site.                                                            | cu m | 40.21 |
| EX.38 | Take out silt, loose muddy soil or other materials from existing running storewater channels, drains exceeding 150 mm deep, sump pits or cesspits and remove, deposit, spread and level in positions as directed by the University or remove off site from shallow drains not exceeding 150 mm deep.              | m    | 1.02  |
| EX.39 | Take out silt, loose muddy soil or other materials from existing running storewater channels drains exceeding 150 mm deep, sump pits or cesspits and remove, deposit, spread and level in positions as directed by the University or remove off site but including clearing grass on one or both sides of drains. | m    | 2.38  |

| EX.40 | Sand in bed, filling, etc. irrespective of thickness, deposited, spread, levelled and rammed with mechanical rammer, or rolled with hand roller.                                                                 | cu m | 91.12  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|--------|
| EX.41 | 60 mm granite aggregate in beds, fillings, etc. irrespective of thickness, deposited, spread, levelled and rammed with mechanical rammer, or rolled with hand roller.                                            | cu m | 108.59 |
| EX.42 | 40 mm granite aggregate in beds, fillings, etc. irrespective of thickness, deposited, spread, levelled and rammed with mechanical rammer, or rolled with hand roller.                                            | cu m | 91.04  |
| EX.43 | 20 mm granite aggregate in beds, fillings, etc. irrespective of thickness, deposited, spread, levelled and rammed with mechanical rammer, or rolled with hand roller.                                            | cu m | 85.94  |
| EX.44 | 12 mm granite aggregate in beds, fillings, etc. irrespective of thickness, deposited, spread, levelled and rammed with mechanical rammer, or rolled with hand roller.                                            | cu m | 80.54  |
| EX.45 | 3 mm to 6 mm granite chipping in beds, filling, etc. irrespective of thickness, deposited, spread, levelled and rammed with mechanical rammer, or rolled with hand roller.                                       | cu m | 69.57  |
| EX.46 | Quarry waste in beds, filling, etc. irrespective of thickness, deposited, spread, levelled and rammed with mechanical rammer, or rolled with hand roller.                                                        | cu m | 53.47  |
| EX.47 | Hardcore as specified in beds, making up levels, etc. and deposited, spread, levelled mechanically consolidated in (in layers of 300 mm thick if exceeding 300 mm thick) and top blinded with sand/granite dust. | cu m | 68.34  |
| EX.48 | Breaking up for brick paving, tarmacadam including granite base course or other existing obstructions on the surface of the ground not exceeding 300 mm thick and removing debris off site.                      | sq m | 17.43  |
| EX.49 | Breaking up for brick paving, tarmacadam including granite base course or other existing obstructions on the surface of the ground but exceeding 300 mm thick and removing debris off site.                      | cu m | 65.79  |

| EX.50 | Break up concrete bases(including excavation around base) not exceeding 0.10 cu m to posts, gate stops, etc. break up concrete, remove debris off site and fill with earth to be obtained from Contractor's own sources and make good.                       | no | 9.86  |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-------|
| EX.51 | Break up concrete bases(including excavation around base) exceeding 0.10cu m but not exceeding 0.30cu m to posts, gate stops, etc. break up concrete, remove debris off site and fill with earth to be obtained from Contractor's own sources and make good. | no | 28.14 |
| EX.52 | Cutting of tarmacadam surface, brick pavement etc. using powered diamond cutter to achieve straight edge not exceeding 150 mm depth.                                                                                                                         | m  | 10.63 |
| EX.53 | Provide and assemble piling equipment on site to drive bakau pile including moving it around site, subsequent dismantling and removal on completion.                                                                                                         | no | 680   |
| EX.54 | Provide and assemble piling equipment on site to drive treated timber pile including moving it around site, subsequent dismantling and removal on completion.                                                                                                | no | 1020  |
| EX.55 | Provide and assemble piling equipment on site to drive micro pile including moving it around site, subsequent dismantling and removal on completion.                                                                                                         | no | 2550  |
| EX.56 | Supply and drive 80 mm diameter bakau pile. Not exceeding 2.20m long including cutting of pile.                                                                                                                                                              | no | 3.61  |
| EX.57 | Supply and drive 80 mm diameter bakau pile. Exceeding 2.20m but not exceeding 4.40m long including cutting of pile.                                                                                                                                          | no | 5.78  |
| EX.58 | Supply and drive 80 mm diameter bakau pile. Exceeding 4.40m but not exceeding 6.60m long including cutting of pile.                                                                                                                                          | no | 9.35  |
| EX.59 | Supply and drive 80 mm diameter bakau pile. Exceeding 4.40m but not exceeding 6.60m long including cutting of pile and mild steel pipe sleeves.                                                                                                              | no | 11.82 |

| EX.60 | Supply and drive 80 mm diameter bakau pile. Exceeding 6.60m but not exceeding 8.80m long including cutting of pile and mild steel pipe sleeves.                                                                                                                                                                                                                                                                                                                                                                 | no | 15.22 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-------|
| EX.61 | Supply and drive 80 mm diameter bakau pile. Supply and lay 80mm diameter bakau roller.                                                                                                                                                                                                                                                                                                                                                                                                                          | m  | 1.19  |
| EX.62 | Supply and drive 100 mm x 100 mm pressure treated timber piles with an approved piling frame and monkey (transporting of piling frame to and from site measured separately)including maneuvering piling frame within site, testing, pitching, heading, pointing and splicing and driving down to an approved set and finally cutting off top of pile to the required level where necessary excavation and disposal of material displaced consequent upon the driving of the pile (Penetration length measured). | m  | 14.66 |
| EX.63 | Supply and drive 125mm x 125mm pressure treated timber piles with an approved piling frame and monkey(transporting of piling frame to and from site measured separately)including maneuvering piling frame within site, testing, pitching, heading, pointing and splicing and driving down to an approved set and finally cutting off top of pile to the required level where necessary excavation and disposal of material displaced consequent upon the driving of the pile (Penetration length measured).    | m  | 16.62 |
| EX.64 | Supply and drive 150mm x 150mm pressure treated timber piles with an approved piling frame and monkey(transporting of piling frame to and from site measured separately)including maneuvering piling frame within site, testing, pitching, heading, pointing and splicing and driving down to an approved set and finally cutting off top of pile to the required level where necessary excavation and disposal of material displaced consequent upon the driving of the pile (Penetration length measured).    | m  | 19.55 |
| EX.65 | Supply and drive 175mm x 175mm pressure treated timber piles with an approved piling frame and monkey(transporting of piling frame to and from site measured separately)including maneuvering piling frame within site, testing, pitching, heading, pointing and splicing and driving down to an approved set and finally cutting off top of pile to the required level where necessary excavation and disposal of material displaced consequent upon the driving of the pile (Penetration length measured).    | m  | 25.42 |
| EX.66 | Supply and fix 5 mm thick mild steel welded box joint size $100 \times 100 \times 450$ mm including all handling, cutting and spiking to pile.                                                                                                                                                                                                                                                                                                                                                                  | no | 13.69 |
| EX.67 | Supply and fix 5 mm thick mild steel welded box joint size 125 x 125 x 450 mm including all handling, cutting and spiking to pile.                                                                                                                                                                                                                                                                                                                                                                              | no | 15.64 |
| EX.68 | Supply and fix 5 mm thick mild steel welded box joint size 150 x 150 x 450 mm including all handling, cutting and spiking to pile.                                                                                                                                                                                                                                                                                                                                                                              | no | 17.6  |

| EX.69 | Supply and fix 5 mm thick mild steel welded box joint size 175 x 175 x 450 mm including all handling, cutting and spiking to pile.                                                                                                                                                                                                                                    | no   | 20.57 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|
| EX.70 | Strip turf average 50 mm deep, lay aside and preserve for re-use (preserving not exceeding 7 days).                                                                                                                                                                                                                                                                   | sq m | 2.13  |
| EX.71 | Take turf from stake and relay to level or slightly sloping ground (less than 45 degree) including 50 mm thick topsoil and sludge, top dressing, weeding out unwanted grass and weeds, cutting, watering and tending, and replacing when necessary until grass is established.                                                                                        | sq m | 5.36  |
| EX.72 | Strip turf and remove off site (not extra over item).                                                                                                                                                                                                                                                                                                                 | sq m | 1.36  |
| EX.73 | Cow-grass (Axonopus Compressors) obtained from Contractor's own sources laid or slightly sloping surfaces (less than 45 degrees) at 450 mm centres including 25 mm thick topsoil and sludge(1:1), top dressing, weeding out unwanted grass and weeds cutting, watering and tending and replacing when necessary until the grass is established(spot turfing).         | sq m | 3.4   |
| EX.74 | Cow-grass (Axonopus Compressors) obtained from Contractor's own sources laid or slightly sloping surfaces (less than 45 degrees) at 450 mm centres including 25 mm thick topsoil and sludge(1:1), top dressing, weeding out unwanted grass and weeds cutting, watering and tending and replacing when necessary until the grass is laid edge to edge (close turfing). | sq m | 3.91  |
| EX.75 | 25 mm thick (finished thickness) selected black soil obtained from Contractor's own sources, deposited, spread, levelled and rolled with a hand roller and including trimming and levelling formation.                                                                                                                                                                | sq m | 1.11  |
| EX.76 | Add for each additional 25 mm thick (finished thickness) of selected black soil obtained from Contractor's own sources, deposited, spread, levelled and rolled with a hand roller and including trimming and levelling formation.                                                                                                                                     | sq m | 0.85  |
| EX.77 | 25 mm thick topsoil and sludge mixture (3:1) obtained from Contractor's own sources, deposited, spread levelled and rolled with a hand roller.                                                                                                                                                                                                                        | sq m | 0.77  |
| EX.78 | Add for each additional 25 mm thick of topsoil and sludge mixture (3:1) obtained from Contractor's own sources, deposited, spread levelled and rolled with a hand roller.                                                                                                                                                                                             | sq m | 0.6   |

BW-9

| EX.79 | Plough down not exceeding 300 mm deep with an approved disc plough, break up soil lumps as specified with approved tiller and mix sub-soil with sludge (proportion 6:1) as specified including trimming and leveling.                                   | sq m | 1.19   |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|--------|
| EX.80 | Approved used sawn timber irrespective of sizes, for needling, strutting or shoring, including all hoop-iron (to be left in excavation).                                                                                                                | sq m | 48.11  |
| EX.81 | Approved used sawn timber for protective timber hoarding including erecting and dismantling after use-BCD drawing Type A(75) (where specially ordered, not related to the work and for protective timber hoarding required to be left in) - Appendix 1. | m    | 212.59 |
| EX.82 | Approved used sawn timber for protective timber hoarding including erecting and dismantling after use-BCD drawing Type B(75) (where specially ordered, not related to the work and for protective timber hoarding required to be left in) - Appendix 2. | m    | 130.14 |
| EX.83 | Approved used sawn timber for protective timber hoarding including erecting and dismantling after use-BCD drawing Type C(75) (where specially ordered, not related to the work and for protective timber hoarding required to be left in) - Appendix 3. | m    | 231.37 |

# 2. CONCRETE

| S/No  | Description                                                                                                                                                                                                                                                                 | Unit    | Unit Cost (\$) |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|----------------|
| Con.1 | Concrete grade 15 as specified in bed, under foundations, column base, ground beams, in fillings, etc. irrespective of thickness.                                                                                                                                           | cu<br>m | 210.38         |
| Con.2 | Concrete grade 20 as specified in foundations, beds, steps, slabs, aprons, footpath, etc. irrespective of sizes or thickness, including working around rod or fabric reinforcement, steel beams, stanchions, etc.                                                           | cu<br>m | 219.94         |
| Con.3 | Concrete grade 25 as specified in foundations, beds, suspended slabs, beams, columns, staircases, lintels, walls, suspended canopy, stiffeners etc. irrespective of sizes or thickness, including working around rod or fabric reinforcement, steel beams, stanchions, etc. | cu<br>m | 229.5          |

| Con.4  | Concrete grade 25 as specified in foundations each not exceeding 0.07cu m including all necessary formwork, excavation, removing surplus excavated material off site and backfilling.                                                                   | no      | 19.13  |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|--------|
| Con.5  | Concrete grade 25 as specified in foundations each exceeding 0.07cu m and not exceeding 0.15cu m including all necessary formwork, excavation, removing surplus excavated material off site and backfilling.                                            | no      | 42.08  |
| Con.6  | Concrete grade 30 as specified in foundations, beds, slabs, beams, columns, staircases, retaining walls, ramp, engine beds, etc. irrespective of sizes or thickness, including working around rod or fabric reinforcement, steel beams, stanchions etc. | cu<br>m | 248.63 |
| Con.7  | Concrete grade 35 as specified in foundations, beds, slabs, beams, columns, staircases, retaining walls, etc. irrespective of sizes or thickness, including working around rod or fabric reinforcement, steel beams, stanchions etc.                    | cu<br>m | 258.19 |
| Con.8  | Concrete grade 40 as specified in foundations, beds, slabs, beams, columns, staircases, retaining walls, etc. irrespective of sizes or thickness, including working around rod or fabric reinforcement, steel beams, stanchions etc.                    | cu<br>m | 277.31 |
| Con.9  | Extra over labour for trowelling top surface of concrete to a smooth finish and finished to falls and currents or cambers including additional cement required.                                                                                         | sq<br>m | 3.19   |
| Con.10 | Extra over labour for trowelling top surface of concrete to a rough finish and finished to falls and currents or cambers including additional cement required.                                                                                          | sq<br>m | 2.55   |
| Con.11 | Ready-mix concrete, grade 10 as specified in foundations, beds, slabs, beams, columns, staircases, retaining walls, etc. irrespective of sizes or thickness including working around rod or fabric reinforcement, steel beams, stanchions etc.          | cu<br>m | 172.13 |
| Con.12 | Ready-mix concrete, grade 20 as specified in foundations, beds, slabs, beams, columns, staircases, retaining walls, etc. irrespective of sizes or thickness including working around rod or fabric reinforcement, steel beams, stanchions etc.          | cu<br>m | 191.25 |
| Con.13 | Ready-mix concrete, grade 25 as specified in foundations, beds, slabs, beams, columns, staircases, retaining walls, etc. irrespective of sizes or thickness including working around rod or fabric reinforcement, steel beams, stanchions etc.          | cu<br>m | 200.81 |

|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-------|
| Con.32 | Extra over surface water drain (any width) for forming cascade exceeding 150 mm but not exceeding 300 mm drop.                                                                                                                                                                                                                                                                                                                                                     | no | 5.87  |
| Con.33 | Hack up existing surface water drain and remove debris off site.                                                                                                                                                                                                                                                                                                                                                                                                   | m  | 5.48  |
| Con.34 | Cut out cracks in surface water channels or drains (any type & size) including removing silt and cutting grass on banks.                                                                                                                                                                                                                                                                                                                                           | m  | 5.1   |
| Con.35 | Form 100 mm wide scupper drain in existing concrete floor, made to correct line and falls and form rebate to receive grating if any, render invert and sides with 15 mm cement and sand (1:3) and including hacking existing concrete of similar grade to floor below scupper drain, making good surrounds, form-work and clearing debris off site.                                                                                                                | m  | 35.7  |
| Con.36 | Form 125 mm wide scupper drain in existing concrete floor, made to correct line and falls and form rebate to receive grating if any, render invert and sides with 15 mm cement and sand (1:3) and including hacking existing concrete of similar grade to floor below scupper drain, making good surrounds, form-work and clearing debris off site.                                                                                                                | m  | 36.98 |
| Con.37 | Form 150 mm wide scupper drain in existing concrete floor, made to correct line and falls and form rebate to receive grating if any, render invert and sides with 15 mm cement and sand (1:3) and including hacking existing concrete of similar grade to floor below scupper drain, making good surrounds, form-work and clearing debris off site.                                                                                                                | m  | 38.25 |
| Con.38 | Form 250 mm wide scupper drain in existing concrete floor, made to correct line and falls and form rebate to receive grating if any, render invert and sides with 15 mm cement and sand (1:3) and including hacking existing concrete of similar grade to floor below scupper drain, making good surrounds, form-work and clearing debris off site.                                                                                                                | m  | 43.35 |
| Con.39 | Concrete (Grade 25) in curbs etc. irrespective of size in new or existing work including hacking, formwork, angles, ends, intersections, jointing to existing and removing debris per 1,000 sq. mm sectional area. Rate is for every 1,000 sq. mm in sectional area eg.75 mm x 100 mm curb = 7,500 sq. mm in sectional area. Therefore rate is \$11.25 per lin. metre i.e.(7500 x 1.50)/1000.                                                                      | m  | 2.76  |
| Con.40 | Concrete (Grade 25) in curbs rendered on both sides and top with 15 mm cement and sand rendering, (irrespective of size) in new or existing work including hacking, formwork, angles, ends, intersections, jointing to existing and removing debris per 1,000 sq mm in sectional area. Rate is for every 1,000 sq. mm in sectional area eg. 75 mm x 100 mm curb = 7,500 sq. mm in sectional area. Therefore rate is \$15.00 per lin. metre ie. (7500 x 2.00)/1000. | m  | 4.42  |

| Con.41 | Precast concrete (grade 20) in new or existing work with all exposed faces finished fair, bedded, jointed and pointed in cement mortar (1:3) or with edges bedded and pointed in putty or mastic including making good, removing debris, all necessary moulds, transporting, handling and fixing in posts, bollards, blocks, lintels, copings, cills, steps, strings, railings etc. irrespective of size including all temporary support and hoisting up to 3 m above ground level.                                                                                    | cu<br>m | 841.5 |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| Con.42 | Extra over above for each additional 1.50 m of hoisting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | cu<br>m | 25.5  |
| Con.43 | Precast concrete (grade 20) in new or existing work with all exposed faces finished fair, bedded, jointed and pointed in cement mortar (1:3) or with edges bedded and pointed in putty or mastic including making good, removing debris, all necessary moulds, transporting, handling and fixing in 60 mm thick louvered vents including spacer block.                                                                                                                                                                                                                 | sq<br>m | 244.8 |
| Con.44 | Precast concrete (grade 20) in new or existing work with all exposed faces finished fair, bedded, jointed and pointed in cement mortar (1:3) or with edges bedded and pointed in putty or mastic including making good, removing debris, all necessary moulds, transporting, handling and fixing in 50mm thick slabs over drains, sumps, septic tanks, etc complete with recesses, rebates, grooves, holes, hand-holds, mild steel flush lifting rings, etc. and reinforced with and including approved fabric reinforcement and top surface rendered smooth to falls. | sq<br>m | 32.59 |
| Con.45 | Add for each additional stage of 15 mm in thickness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | sq<br>m | 6.38  |
| Con.46 | Deduct for each additional stage of 15 mm in thickness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | sq<br>m | 6.38  |
| Con.47 | Precast concrete (grade 20) in new or existing work with all exposed faces finished fair, bedded, jointed and pointed in cement mortar (1:3) or with edges bedded and pointed in putty or mastic including making good, removing debris, all necessary moulds, transporting, handling and fixing in 50 mm thick slab for footpath, paving or apron slabs in suitable sizes.                                                                                                                                                                                            | sq<br>m | 53.55 |
| Con.48 | Add for each additional stage of 15 mm in thickness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | sq<br>m | 4.46  |
| Con.49 | Deduct for each additional stage of 15 mm in thickness.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | sq<br>m | 4.46  |

| Con.50 | Supply and lay approved 120 mm thick precast concrete slabs, of any pattern laid to any pattern and fill all voids with top soil and turf including excavation and trimming to formation and removing surplus excavated materials off site (sand bed measured separately). | sq<br>m | 91.8  |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| Con.51 | Supply and lay approved 115 mm thick precast concrete slabs, of any pattern laid to any pattern and fill all voids with top soil and turf including excavation and trimming to formation and removing surplus excavated materials off site (sand bed measured separately). | sq<br>m | 84.15 |
| Con.52 | Supply and lay approved 100 mm thick precast concrete slabs, of any pattern laid to any pattern and fill all voids with top soil and turf including excavation and trimming to formation and removing surplus excavated materials off site (sand bed measured separately). | sq<br>m | 73.44 |
| Con.53 | Supply and lay approved 75 mm thick precast concrete slabs, of any pattern laid to any pattern and fill all voids with top soil and turf including excavation and trimming to formation and removing surplus excavated materials off site (sand bed measured separately).  | sq<br>m | 64.26 |
| Con.54 | Supply and lay approved 65 mm thick precast concrete slabs, of any pattern laid to any pattern and fill all voids with top soil and turf including excavation and trimming to formation and removing surplus excavated materials off site (sand bed measured separately).  | sq<br>m | 55.08 |
| Con.55 | Select from stack and lay aeration precast concrete slab including filling all voids with top soil and turf, excavating to formation, trimming and removing surplus excavated material off site.                                                                           | sq<br>m | 3.49  |
| Con.56 | Take out existing precast slab and remove off site.                                                                                                                                                                                                                        | sq<br>m | 2.47  |
| Con.57 | Take out existing precast slab, stack up for re-use and remove damaged pieces off site.                                                                                                                                                                                    | sq<br>m | 2.93  |
| Con.58 | Select from stack and lay only precast slab including jointing in cement mortar(1:3) (new slabs measured separately).                                                                                                                                                      | sq<br>m | 4.25  |
| Con.59 | Hack out damaged pointing and repoint in cement mortar to existing precast slabs and pavements not exceeding 63 mm thick irrespective of widths of gaps between slabs and pavements.                                                                                       | m       | 3.19  |

|        |                                                                                                                                                                                                                                                                                                                                                 | _ | _      |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|--------|
| Con.60 | Type C1, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.  | m | 12.24  |
| Con.61 | Type C2, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.  | m | 22.95  |
| Con.62 | Type C3, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.  | m | 29.07  |
| Con.63 | Type C6, Composite precast concrete (Grade 20) channel drain as per drawing shown inAppendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.   | m | 41.31  |
| Con.64 | Type C7, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.  | m | 53.55  |
| Con.65 | Type C7A, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc. | m | 50.49  |
| Con.66 | Type C8A, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc. | m | 116.28 |
| Con.67 | Type C8B, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc. | m | 122.4  |
| Con.68 | Type C4, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 5 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.  | m | 24.48  |
| Con.69 | Type C5, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 5 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.  | m | 29.07  |

| Con.70 | Type C7B, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc. | m  | 44.37  |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|--------|
| Con.71 | Type B1, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.  | m  | 47.43  |
| Con.72 | Type B2, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.  | m  | 53.55  |
| Con.73 | Type B3, Composite precast concrete (Grade 20) channel drain as per drawing shown in Appendix 4 laid to falls as directed on and including 75 mm thick sand bed, with joints grouted in cement mortar (1:3) not more than 20 mm thick including all necessary excavation, trimming, disposal of surplus excavated materials, backfilling, etc.  | m  | 130.05 |
| Con.74 | Type S1 scupper drain and pipe laid to even falls and jointed in cement and sand (1:3) mortar.                                                                                                                                                                                                                                                  | m  | 35.36  |
| Con.75 | Scupper drain and 230 mm diameter concrete pipe laid to even falls and jointed in cement and sand (1:3) mortar.                                                                                                                                                                                                                                 | m  | 36.72  |
| Con.76 | Scupper drain and 300 mm diameter concrete pipe laid to even falls and jointed in cement and sand (1:3) mortar.                                                                                                                                                                                                                                 | m  | 45.9   |
| Con.77 | Scupper drain and 250 mm diameter class AW" heavy duty PVC pipe laid to even falls and "jointed in cement and sand (1:3) mortar.                                                                                                                                                                                                                | m  | 73.44  |
| Con.78 | Take out precast concrete surface water channel (any width and type), trim earth to fall, remove debris off site; join up with cement mortar and temporarily divert drains as necessary and make good (rate not inclusive of new sand bed & channels).                                                                                          | m  | 6.38   |
| Con.79 | Extra over precast concrete surface water channel (any width) for forming cascade not exceeding 150 mm drop.                                                                                                                                                                                                                                    | no | 5.74   |

| Ī      |                                                                                                                                                                                                                                                                                                                                | I  | ı     |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-------|
| Con.80 | Extra over precast concrete surface water channel (any width) for forming cascade exceeding 150 mm but not exceeding 300 mm drop.                                                                                                                                                                                              | no | 11.48 |
| Con.81 | Precast concrete(grade 20) of 125 mm x 300 mm size Type K7/K7A in roadside kerbs and dividers as shown in the appendix 6 & 7 herein including all necessary excavation, removal of surplus excavated material, backfilling, laying, bedding, jointing and pointing in cement mortar (1:3) (concrete base measured separately). | m  | 20.96 |
| Con.82 | Precast concrete(grade 20) of 150 mm x 300 mm size Type D2 in roadside kerbs and dividers as shown in the appendix 6 & 7 herein including all necessary excavation, removal of surplus excavated material, backfilling, laying, bedding, jointing and pointing in cement mortar (1:3) (concrete base measured separately).     | m  | 20.5  |
| Con.83 | Precast concrete(grade 20) of 200 mm x 380 mm size Type D4 in roadside kerbs and dividers as shown in the appendix 6 & 7 herein including all necessary excavation, removal of surplus excavated material, backfilling, laying, bedding, jointing and pointing in cement mortar (1:3) (concrete base measured separately).     | m  | 36.57 |
| Con.84 | Extra over for 125 mm x 300 mm x 900 mm long kerb with scupper mouth.                                                                                                                                                                                                                                                          | no | 2.04  |
| Con.85 | Take out and stack on site for reuse precast concrete kerbs (any size) and remove debris off site.                                                                                                                                                                                                                             | m  | 4.21  |
| Con.86 | Select from stack, lay and join divider/kerb in cement and sand (1:3) mortar.                                                                                                                                                                                                                                                  | m  | 5.74  |
| Con.87 | Take out existing precast concrete kerbs & remove off site.                                                                                                                                                                                                                                                                    | m  | 3.19  |
| Con.88 | Precast concrete (Grade 20) lintel finished fair on all exposed surfaces, Size 115 x 150 mm high and reinforced with one 10 mm diameter mild steel bar.                                                                                                                                                                        | m  | 16.68 |
| Con.89 | Precast concrete (Grade 20) lintel finished fair on all exposed surfaces, Size 115 x 225 mm high and reinforced with one 13 mm diameter mild steel bar.                                                                                                                                                                        | m  | 21.42 |

| Con.90 | Precast concrete (Grade 20) lintel finished fair on all exposed surfaces, Size 225 x 150 mm high and reinforced with two 10 mm diameter mild steel bar.                                       | m       | 26.01 |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| Con.91 | Precast concrete (Grade 20) lintel finished fair on all exposed surfaces, Size 225 x 225 mm high and reinforced with two 13 mm diameter mild steel bar.                                       | m       | 31.98 |
| Con.92 | Timber formwork to plane surface in-situ concrete including strutting not exceeding 3.50m high.                                                                                               | sq<br>m | 34.43 |
| Con.93 | Timber formwork to curved surface in-situ concrete including strutting not exceeding 3.50m high.                                                                                              | sq<br>m | 38.25 |
| Con.94 | Timber formwork to plane surface to produce true and even concrete face in-situ concrete including strutting not exceeding 3.50m high.                                                        | sq<br>m | 35.7  |
| Con.95 | Timber formwork to curved surface to produce true and even concrete face in-situ concrete including strutting not exceeding 3.50m high.                                                       | sq<br>m | 42.08 |
| Con.96 | Extra over formwork for strutting exceeding 3.50 m high for each 1.50 m high.                                                                                                                 | sq<br>m | 3.83  |
| Con.97 | 6 mm to 16 mm diameter mild steel rods in foundations, beams, slabs, stairs, canopies, etc including all labour forming stirup, links, spacer blocks etc to comply with SS18.                 | kg      | 1.91  |
| Con.98 | Over 16 mm diameter mild steel rods in foundations, beams, slabs, stairs, canopies, etc including all labour forming stirup, links, spacer blocks etc to comply with SS18.                    | kg      | 1.79  |
| Con.99 | 9 mm to 16 mm diameter deformed high tensile steel rod in foundations, beams, slabs, stairs, canopies, etc including all labour forming stirups, links, spacer blocks etc to comply with SS2. | kg      | 1.91  |

| Con.100 | 20 mm to 25 mm diameter deformed high tensile steel rod in foundations, beams, slabs, stairs, canopies, etc including all labour forming stirups, links, spacer blocks etc to comply with SS2. | kg      | 1.79  |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| Con.101 | Over 28 mm diameter deformed high tensile steel rod in foundations, beams, slabs, stairs, canopies, etc including all labour forming stirups, links, spacer blocks etc to comply with SS2.     | kg      | 1.91  |
| Con.102 | 200 x 200 mm x 1.54 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type A5).                                                                              | sq<br>m | 3.57  |
| Con.103 | 200 x 200 mm x 2.22 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type A6).                                                                              | sq<br>m | 6.12  |
| Con.104 | 200 x 200 mm x 3.02 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type A7).                                                                              | sq<br>m | 6.38  |
| Con.105 | 200 x 200 mm x 3.95 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type A8).                                                                              | sq<br>m | 7.65  |
| Con.106 | 200 x 200 mm x 4.99 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type A9).                                                                              | sq<br>m | 10.2  |
| Con.107 | 200 x 200 mm x 6.16 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type A10).                                                                             | sq<br>m | 11.48 |
| Con.108 | 100 x 400 mm x 2.61 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type C6).                                                                              | sq<br>m | 6.38  |
| Con.109 | 100 x 400 mm x 3.41 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type C7).                                                                              | sq<br>m | 7.78  |

| Con.110 | 100 x 400 mm x 4.34 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type C8).  | sq<br>m | 8.93  |
|---------|--------------------------------------------------------------------------------------------------------------------|---------|-------|
| Con.111 | 100 x 400 mm x 5.55 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type C9).  | sq<br>m | 10.84 |
| Con.112 | 100 x 400 mm x 6.72 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type C10). | sq<br>m | 12.75 |
| Con.113 | 100 x 400 mm x 8.44 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type C11). | sq<br>m | 15.3  |
| Con.114 | 100 x 400 mm x 9.87 kg/sq m approved fabric reinforcement to SS 32:1986 well lapped and tied at joints (Type C12). | sq<br>m | 17.85 |

| Con.208 | Take out, regrade, relay and repoint inverts of precast drains not exceeding 300 mm internal widths (new inverts measured separately) (Length of drain measured).                                                                                                                                 | m | 5.48  |
| Con.209 | Take out, regrade, relay and repoint inverts of precast drains exceeding 300 mm and not exceeding 450 mm width (new inverts measured separately) (Length of drain measured).                                                                                                                      | m | 6.12  |
| Con.210 | Hack up and regrade inverts, sides and tops of in-situ drains not exceeding 300 mm internal widths (length of drain measured).                                                                                                                                                                    | m | 5.1   |
| Con.211 | Hack up and regrade inverts, sides and tops of in-situ drains exceeding 300 mm and not exceeding 450 mm width (length of drain measured).                                                                                                                                                         | m | 6.38  |
| Con.212 | Cut rebate not exceeding 75 mm wide x 75 mm deep in concrete and render with 15 mm thick cement mortar (1:3).                                                                                                                                                                                     | m | 4.34  |
| Con.213 | Cut groove not exceeding 75 mm wide x 75 mm deep in concrete and render with 15 mm thick cement mortar (1:3).                                                                                                                                                                                     | m | 4.85  |

| Con.214 | Cut out crack to form V-groove in masonry work including cleaning out cut surfaces.                                                                                                                                                                                                  | m  | 2.55  |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-------|
| Con.215 | Cut out cracks in concrete floor, beams, columns, etc. to a width of at least 15 mm form undercut edges, render with cement mortar (1:3) to match existing and remove debris off site.                                                                                               | m  | 3.19  |
| Con.216 | Supply and fix calibrated "tell-tale" glass to existing cracks on plastered walls, etc.                                                                                                                                                                                              | no | 63.75 |
| Con.217 | Coring to brickwork or reinforced concrete wall or slab of dia 25mm, depth 100mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 32.3  |
| Con.218 | Coring to brickwork or reinforced concrete wall or slab of dia 25mm, depth 125mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 40.8  |
| Con.219 | Coring to brickwork or reinforced concrete wall or slab of dia 25mm, depth 150mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 45.05 |
| Con.220 | Coring to brickwork or reinforced concrete wall or slab of dia 25mm, depth 175mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 54.4  |
| Con.221 | Coring to brickwork or reinforced concrete wall or slab of dia 25mm, depth 200mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 57.8  |
| Con.222 | Coring to brickwork or reinforced concrete wall or slab of dia 25mm, depth 225mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 68    |
| Con.223 | Coring to brickwork or reinforced concrete wall or slab of dia 25mm, depth 250mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 69.7  |

| Con.224 | Coring to brickwork or reinforced concrete wall or slab of dia 25mm, depth 275mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.        | no | 82.45 |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-------|
| Con.225 | Coring to brickwork or reinforced concrete wall or slab of dia 25mm, depth 300mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.        | no | 85    |
| Con.226 | Coring to brickwork or reinforced concrete wall or slab of dia 50mm - 52mm, depth 100mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 34.85 |
| Con.227 | Coring to brickwork or reinforced concrete wall or slab of dia 50mm - 52mm, depth 125mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 36.98 |
| Con.228 | Coring to brickwork or reinforced concrete wall or slab of dia 50mm - 52mm, depth 150mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 46.75 |
| Con.229 | Coring to brickwork or reinforced concrete wall or slab of dia 50mm - 52mm, depth 175mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 49.3  |
| Con.230 | Coring to brickwork or reinforced concrete wall or slab of dia 50mm - 52mm, depth 200mm shall                                                                                                                                                                                               | no | 58.65 |
| Con.231 | be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.                                                                                               |    | 0     |
| Con.232 | Coring to brickwork or reinforced concrete wall or slab of dia 50mm - 52mm, depth 225mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 59.5  |
| Con.233 | Coring to brickwork or reinforced concrete wall or slab of dia 50mm - 52mm, depth 250mm shall                                                                                                                                                                                               | no | 65.45 |

| Con.234 | be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.                                                                                               |    | 0     |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-------|
| Con.235 | Coring to brickwork or reinforced concrete wall or slab of dia 50mm - 52mm, depth 275mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 69.7  |
| Con.236 | Coring to brickwork or reinforced concrete wall or slab of dia 50mm - 52mm, depth 300mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 88.4  |
| Con.237 | Coring to brickwork or reinforced concrete wall or slab of dia 65mm, depth 100mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.        | no | 36.98 |
| Con.238 | Coring to brickwork or reinforced concrete wall or slab of dia 65mm, depth 125mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.        | no | 42.5  |
| Con.239 | Coring to brickwork or reinforced concrete wall or slab of dia 65mm, depth 150mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.        | no | 47.6  |
| Con.240 | Coring to brickwork or reinforced concrete wall or slab of dia 65mm, depth 175mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.        | no | 52.7  |
| Con.241 | Coring to brickwork or reinforced concrete wall or slab of dia 65mm, depth 200mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.        | no | 59.5  |
| Con.242 | Coring to brickwork or reinforced concrete wall or slab of dia 65mm, depth 225mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.        | no | 65.45 |
| Con.243 | Coring to brickwork or reinforced concrete wall or slab of dia 65mm, depth 250mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.        | no | 70.55 |

| _       |                                                                                                                                                                                                                                                                                             | _  |       |

No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.    | no | 104.55 |
| Con.255 | Coring to brickwork or reinforced concrete wall or slab of dia 100mm - 108mm, depth 100mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.  | no | 59.5   |
| Con.256 | Coring to brickwork or reinforced concrete wall or slab of dia 100mm - 108mm, depth 125mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.  | no | 64.26  |
| Con.257 | Coring to brickwork or reinforced concrete wall or slab of dia 100mm - 108mm, depth 150mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.  | no | 75.74  |
| Con.258 | Coring to brickwork or reinforced concrete wall or slab of dia 100mm - 108mm, depth 175mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.  | no | 78.2   |
| Con.259 | Coring to brickwork or reinforced concrete wall or slab of dia 100mm - 108mm, depth 200mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.  | no | 90.95  |
| Con.260 | Coring to brickwork or reinforced concrete wall or slab of dia 100mm - 108mm, depth 225mm shall be at the rate s stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 91.8   |
| Con.261 | Coring to brickwork or reinforced concrete wall or slab of dia 100mm - 108mm, depth 250mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.  | no | 104.55 |
| Con.262 | Coring to brickwork or reinforced concrete wall or slab of dia 100mm - 108mm, depth 275mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.  | no | 107.1  |
| Con.263 | Coring to brickwork or reinforced concrete wall or slab of dia 100mm - 108mm, depth 300mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor.  | no | 121.55 |

| Con.264 | Coring to brickwork or reinforced concrete wall or slab of dia 125mm - 132mm, depth 100mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 76.5   |
|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|--------|
| Con.265 | Coring to brickwork or reinforced concrete wall or slab of dia 125mm - 132mm, depth 125mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 82.45  |
| Con.266 | Coring to brickwork or reinforced concrete wall or slab of dia 125mm - 132mm, depth 150mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 97.75  |
| Con.267 | Coring to brickwork or reinforced concrete wall or slab of dia 125mm - 132mm, depth 175mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 100.3  |
| Con.268 | Coring to brickwork or reinforced concrete wall or slab of dia 125mm - 132mm, depth 200mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 117.3  |
| Con.269 | Coring to brickwork or reinforced concrete wall or slab of dia 125mm - 132mm, depth 225mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 120.7  |
| Con.270 | Coring to brickwork or reinforced concrete wall or slab of dia 125mm - 132mm, depth 250mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 136.85 |
| Con.271 | Coring to brickwork or reinforced concrete wall or slab of dia 125mm - 132mm, depth 275mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 139.83 |
| Con.272 | Coring to brickwork or reinforced concrete wall or slab of dia 125mm - 132mm, depth 300mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 156.4  |
| Con.273 | Coring to brickwork or reinforced concrete wall or slab of dia 150mm - 152mm, depth 100mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 90.1   |

| Con.425 | Coring to RC retaining wall, column or beam of dia 225mm, depth 275mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 307.7  |
| Con.426 | Coring to RC retaining wall, column or beam of dia 225mm, depth 300mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 330.65 |
| Con.427 | Coring to RC retaining wall, column or beam of dia 250mm, depth 100mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 213.35 |
| Con.428 | Coring to RC retaining wall, column or beam of dia 250mm, depth 125mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 234.6  |
| Con.429 | Coring to RC retaining wall, column or beam of dia 250mm, depth 150mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 257.55 |
| Con.430 | Coring to RC retaining wall, column or beam of dia 250mm, depth 175mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 280.5  |
| Con.431 | Coring to RC retaining wall, column or beam of dia 250mm, depth 200mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 300.05 |
| Con.432 | Coring to RC retaining wall, column or beam of dia 250mm, depth 225mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 321.3  |
| Con.433 | Coring to RC retaining wall, column or beam of dia 250mm, depth 250mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 342.55 |

| Con.434 | Coring to RC retaining wall, column or beam of dia 250mm, depth 275mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 363.8  |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|--------|
| Con.435 | Coring to RC retaining wall, column or beam of dia 250mm, depth 300mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 385.05 |
| Con.436 | Coring to RC retaining wall, column or beam of dia 275mm, depth 100mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 238    |
| Con.437 | Coring to RC retaining wall, column or beam of dia 275mm, depth 125mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 257.55 |
| Con.438 | Coring to RC retaining wall, column or beam of dia 275mm, depth 150mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 277.1  |
| Con.439 | Coring to RC retaining wall, column or beam of dia 275mm, depth 175mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 296.65 |
| Con.440 | Coring to RC retaining wall, column or beam of dia 275mm, depth 200mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 315.35 |
| Con.441 | Coring to RC retaining wall, column or beam of dia 275mm, depth 225mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 334.9  |
| Con.442 | Coring to RC retaining wall, column or beam of dia 275mm, depth 250mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 354.45 |
| Con.443 | Coring to RC retaining wall, column or beam of dia 275mm, depth 275mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 374    |

| Con.444 | Coring to RC retaining wall, column or beam of dia 275mm, depth 300mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 392.7  |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|--------|
| Con.445 | Coring to RC retaining wall, column or beam of dia 300mm, depth 100mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 261.8  |
| Con.446 | Coring to RC retaining wall, column or beam of dia 300mm, depth 125mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 288.15 |
| Con.447 | Coring to RC retaining wall, column or beam of dia 300mm, depth 150mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 315.35 |
| Con.448 | Coring to RC retaining wall, column or beam of dia 300mm, depth 175mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 342.55 |
| Con.449 | Coring to RC retaining wall, column or beam of dia 300mm, depth 200mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 369.75 |
| Con.450 | Coring to RC retaining wall, column or beam of dia 300mm, depth 225mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 396.95 |
| Con.451 | Coring to RC retaining wall, column or beam of dia 300mm, depth 250mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 424.15 |
| Con.452 | Coring to RC retaining wall, column or beam of dia 300mm, depth 275mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 451.35 |
| Con.453 | Coring to RC retaining wall, column or beam of dia 300mm, depth 300mm shall be at the rates stipulated. No mobilisation charge for total coring works value above \$300/ Rates above includes the provision of electricity, scaffolding & water supply etc by Contractor. | no | 480.25 |

| Con.454 | Add mobilisation charge for total coring works value below \$300/                                     | no      | 102    |
|---------|-------------------------------------------------------------------------------------------------------|---------|--------|
| Con.455 | 150 mm wide pvc water-stop embeded in concrete.                                                       | m       | 28.05  |
| Con.456 | 200 mm wide pvc water-stop embeded in concrete.                                                       | m       | 33.41  |
| Con.457 | 230 mmm wide pvc water-stop embeded in concrete                                                       | m       | 38.89  |
| Con.458 | 12 mm thick closed cell expanded polyethylene filler board to joint including all necessary formwork  | sq<br>m | 127.67 |
| Con.459 | 20 mm thick closed cell expanded polyethylene filler board to joint including all necessary formwork  | sq<br>m | 144.5  |
| Con.460 | 25 mm thick closed cell expanded polyethylene filler board to joint including all necessary formwork. | sq<br>m | 196.69 |
| Con.461 | Polysulphide sealer squeezed into 25 x 15 mm joint.                                                   | m       | 14.54  |
| Con.462 | Polysulphide sealer squeezed into 25 x 25 mm joint.                                                   | m       | 23.33  |
| Con.463 | Polysulphide sealer squeezed into 50 x 15 mm joint.                                                   | m       | 37.61  |

**BW-58** 

| Con.464 | Concrete (Grade 20) heelstone cast to suit section of door frame including one 100 x 13 mm diameter mild steel dowel and 150 mm high. | no | 10.71 |

# 3. BRICKWORK

| S/No | Description                                                                                                                                 | Unit    | Unit Cost (\$) |
|------|---------------------------------------------------------------------------------------------------------------------------------------------|---------|----------------|
| BW.1 | Brick-on-edge wall with brickwork in common bricks                                                                                          | sq<br>m | 22.36          |
| BW.2 | Half brick thick wall (102.5 mm thick) with brickwork in common bricks.                                                                     | sq<br>m | 32.3           |
| BW.3 | One brick wall (215 mm thick) with brickwork in common bricks.                                                                              | sq<br>m | 60.52          |
| BW.4 | Half brick thick built honeycomb in common bricks with joints raked out and pointed in tinted cement as the work proceeds.                  | sq<br>m | 29.33          |
| BW.5 | Extra over common brickwork for building fair face with joints raked out and pointed in tinted cement as the work proceeds (one side only). | sq<br>m | 4.42           |
| BW.6 | Extra over common brickwork for building for facing in first quality clay facing bricks (one side only).                                    | sq<br>m | 9.78           |
| BW.7 | Extra over common brickwork for building for facing in clinker facing bricks (one side only).                                               | sq<br>m | 25.5           |

| BW.8  | Extra over common brickwork for building for facing in sand face /perforated facing bricks or plainface perforated facing bricks (one side only).                                | sq<br>m | 11.22 |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| BW.9  | 90 mm thick brickwork in cement/sand/concrete bricks (15 mn/sq m).                                                                                                               | sq<br>m | 26.95 |
| BW.10 | 190 mm thick brickwork in cement/sand/concrete bricks (15 mn/sq m).                                                                                                              | sq<br>m | 49.9  |
| BW.11 | 290 mm thick brickwork in cement/sand/concrete bricks (15 mn/sq m).                                                                                                              | sq<br>m | 62.56 |
| BW.12 | Half brick thick (102.5 mm thick) engineering bricks.                                                                                                                            | sq<br>m | 50.32 |
| BW.13 | One brick thick (215 mm thick) engineering bricks.                                                                                                                               | no      | 95.88 |
| BW.14 | Half brick thick built honeycomb brickwork built entirely in first quality clay facing bricks one side with joints raked out and pointed in tinted cement as the work proceeds.  | sq<br>m | 27.8  |
| BW.15 | Half brick thick (102.5 mm thick) brickwork built entirely in first quality clay facing bricks one side with joints raked out and pointed in tinted cement as the work proceeds. | sq<br>m | 39.78 |
| BW.16 | One brick thick (215 mm thick) brickwork built entirely in first quality clay facing bricks one side with joints raked out and pointed in tinted cement as the work proceeds.    | sq<br>m | 71.83 |
| BW.17 | Half brick thick honeycomb brickwork built entirely in clinker facing bricks one side with joints raked out and pointed in tinted cement as the work proceeds.                   | sq<br>m | 35.87 |

| BW.18 | Half brick thick brickwork built entirely in clinker facing bricks one side with joints raked out and pointed in tinted cement as the work proceeds.                                  | sq<br>m | 50.41 |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| BW.19 | One brick thick brickwork built entirely in clinker facing bricks one side with joints raked out and pointed in tinted cement as the work proceeds.                                   | sq<br>m | 92.57 |
| BW.20 | Half brick thick honeycomb brickwork built entirely in sandface/plain-face perforated facing bricks one side with joints raked out and pointed in tinted cement as the work proceeds. | sq<br>m | 28.82 |
| BW.21 | Half brick thick brickwork built entirely in sandface/plain-face perforated facing bricks one side with joints raked out and pointed in tinted cement as the work proceeds.           | sq<br>m | 41.14 |
| BW.22 | One brick thick brickwork built entirely in sandface/plain-face perforated facing bricks one side with joints raked out and pointed in tinted cement as the work proceeds.            | sq<br>m | 74.46 |
| BW.23 | Half brick thick honeycomb brickwork built both sides entirely in first quality clay facing bricks with joints raked out and pointed in tinted cement as the work proceeds.           | sq<br>m | 31.54 |
| BW.24 | Half brick thick brickwork built both sides entirely in first quality clay facing bricks with joints raked out and pointed in tinted cement as the work proceeds.                     | sq<br>m | 44.54 |
| BW.25 | One brick thick brickwork built both sides entirely in first quality clay facing bricks with joints raked out and pointed in tinted cement as the work proceeds.                      | sq<br>m | 78.29 |
| BW.26 | Half brick thick built honeycomb brickwork built both sides entirely in clinker facing bricks with joints raked out and pointed in tinted cement as the work proceeds.                | sq<br>m | 39.61 |
| BW.27 | Half brick thick brickwork built both sides entirely in clinker facing bricks with joints raked out and pointed in tinted cement as the work proceeds.                                | sq<br>m | 55.17 |

| BW.28 | One brick thick brickwork built both sides entirely in clinker facing bricks with joints raked out and pointed in tinted cement as the work proceeds.                                                                                                                            | sq<br>m | 99.54 |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| BW.29 | Half brick thick built honeycomb brickwork built both sides entirely in sandface perforated facing bricks/plain-face perforated facing bricks with joints raked out and pointed in tinted cement as the work proceeds.                                                           | sq<br>m | 29.67 |
| BW.30 | Half brick thick brickwork built both sides entirely in sandface perforated facing bricks/plain-face perforated facing bricks with joints raked out and pointed in tinted cement as the work proceeds.                                                                           | sq<br>m | 45.82 |
| BW.31 | One brick thick brickwork built both sides entirely in sandface perforated facing bricks/plain-face perforated facing bricks with joints raked out and pointed in tinted cement as the work proceeds.                                                                            | sq<br>m | 80.75 |
| BW.32 | Wash existing pointed brickwalls or blockwalls with caustic soda or other similar chemical cleaning liquid and removing dirt, grease, stains, fungus, etc.                                                                                                                       | sq<br>m | 1.11  |
| BW.33 | Hack out damaged pointing in joints and re-point in cement mortar or neat tinted cement as necessary to match existing (one side only).                                                                                                                                          | sq<br>m | 1.53  |
| BW.34 | 75 mm thick aerated concrete blocks (4.1 n/sq mm) in partition, infill panel and the like.                                                                                                                                                                                       | sq<br>m | 25.93 |
| BW.35 | $100\ \text{mm}$ thick aerated concrete blocks (4.1 n/sq mm) in partition, infill panel and the like.                                                                                                                                                                            | sq<br>m | 32.73 |
| BW.36 | 75 mm thick hollow concrete blocks laid in cement mortar(1:4) with 10mm joints including cutting, toothing, bonding, waste and preparing existing wall to receive new and reinforced at every course with and including "Exmet" or other equal and approved brick reinforcement. | sq<br>m | 17.34 |
| BW.37 | 100 mm thick hollow concrete blocks laid in cement mortar(1:4) with 10mm joints including cutting, toothing, bonding, waste and preparing existing wall to receive new and reinforced at every course with and including "Exmet" or other equal and approved brick reinforcement | sq<br>m | 20.15 |

| BW.38 | 150 mm thick hollow concrete blockslaid in cement mortar(1:4) with 10mm joints including cutting, toothing, bonding, waste and preparing existing wall to receive new and reinforced at every course with and including "Exmet" or other equal and approved brick reinforcement. | sq<br>m | 23.97  |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|--------|
| BW.39 | Extra over blockwork for building fairface with joints raked out and pointed in cement as the works proceeds (one side only).                                                                                                                                                    | sq<br>m | 2.47   |
| BW.40 | Extra over for filling 75 mm thick block solid with concrete (grade 15 ).                                                                                                                                                                                                        | sq<br>m | 1.36   |
| BW.41 | Extra over for filling 100 mm thick block solid with concrete (grade 15 ).                                                                                                                                                                                                       | sq<br>m | 1.36   |
| BW.42 | Extra over for filling 150 mm thick block solid with concrete (grade 15 ).                                                                                                                                                                                                       | sq<br>m | 3.49   |
| BW.43 | 100 mm thick concrete vent block in grille blockwall consisting of rain-<br>proof concrete vent blocks (any size) bedded and jointed in cement mortar<br>(1:6) reinforced every course with and including approved galvanised brick<br>reinforcement.                            | sq<br>m | 54.66  |
| BW.44 | 113 mm thick concrete vent block in grille blockwall consisting of rain-<br>proof concrete vent blocks (any size) bedded and jointed in cement mortar<br>(1:6) reinforced every course with and including approved galvanised brick<br>reinforcement.                            | sq<br>m | 56.27  |
| BW.45 | 150 mm thick concrete vent block in grille blockwall consisting of rain-<br>proof concrete vent blocks (any size) bedded and jointed in cement mortar<br>(1:6) reinforced every course with and including approved galvanised brick<br>reinforcement.                            | sq<br>m | 67.75  |
| BW.46 | Hammer dressed random rubble wall in selected granite blocks laid in cement mortar (1:3) including raking out joints and pointing in plain or white cement as work proceeds.                                                                                                     | cu<br>m | 201.11 |
| BW.47 | Render top of granite wall with cement mortar (1:3) average 50 mm thick including layer of mesh reinforcement.                                                                                                                                                                   | sq<br>m | 14.45  |

| BW.48 | Extra over for setting granite blocks against slipped banks.                                                                                                  | cu<br>m | 20.32 |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| BW.49 | 112.5 mm wide 3 ply bituminous felt horizontal damp proof course complying with BS 743 Type B in cement mortar (1:4) with mortar plasticiser to wall.         | m       | 0.6   |
| BW.50 | 225 mm wide 3 ply bituminous felt horizontal damp proof course complying with BS 743 Type B in cement mortar (1:4) with mortar plasticiser to wall.           | m       | 1.19  |
| BW.51 | Exceeding 300 mm wide 3 ply bituminous felt horizontal damp proof course complying with BS 743 Type B in cement mortar (1:4) with mortar plasticiser to wall. | sq<br>m | 12.58 |
| BW.52 | 0.6 mm thick polythylene moisture barrier laid to top, side or underside of concrete structure.                                                               | sq<br>m | 6.89  |
| BW.53 | 0.8 mm thick polythylene moisture barrier laid to top, side or underside of concrete structure.                                                               | sq<br>m | 10.8  |
| BW.54 | Sisalthene '300' heavy weight building paper laid to top, side or underside of concrete structure.                                                            | sq<br>m | 2.55  |
| BW.55 | Sisalkraft '355' medium weight building paper laid to top, side or underside of concrete structure.                                                           | sq<br>m | 4.08  |
| BW.56 | 1.5 mm thick Trocal type 'T' membrance with 2 layers of geotextile fleece laid to top, side or underside of concrete structure.                               | sq<br>m | 45.9  |
| BW.57 | 2.0 mm thick Trocal type 'T' membrance with 2 layers of geotextile fleece laid to top, side or underside of concrete structure.                               | sq<br>m | 50.83 |

| BW.58 | Supply and apply one coat of "DRIWAL" colourless waterproof compound to exposed surfaces of fair-faced brickwall.                                                     | sq<br>m | 3.4    |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|--------|
| BW.59 | Supply and apply additional coating of "DRIWAL" colourless waterproof compound to exposed surfaces of fair-faced brickwall.                                           | sq<br>m | 2.93   |
| BW.60 | Prepare and apply "Colpave" sealer along the crack line on walls or slabs to cure leaks.                                                                              | m       | 6.89   |
| BW.61 | 38 mm x 3 mm galvanished wrougt iron or primed mild steel holdfast 225 mm long, one end turned up and screwed to timber and other end spilt and built into brickwork. | no      | 1.02   |
| BW.62 | 38 mm x 3 mm galvanished wrougt iron or primed mild steel holdfast 150 mm long, one end turned up and screwed to timber and other end spilt and built into brickwork. | no      | 0.77   |
| BW.63 | Hack off existing brickwork and/or blockwork, clear of site and stack good bricks aside for re-use and including all necessary minor shoring.                         | cu<br>m | 89.93  |
| BW.64 | Hack off existing granite rubble wall, clear off site or stack good blocks aside for re-use and cart debris off site and including all necessary minor shoring.       | cu<br>m | 100.13 |
| BW.65 | Take from stack and rebuilt granite random rubble wall in cement mortar (1:3) with joints raked out and pointed in plain or white cement as the work proceeds.        | cu<br>m | 161.84 |
| BW.66 | One course brick-on-edge laid in cement mortar (1:3) with 10 mm joints in steps, sills, copings, footpaths etc (Plan area measured).                                  | sq<br>m | 46.75  |
| BW.67 | Replace all broken and missing brick-on-edge in steps, sills, copings and the like with new one in cement mortar (1:3) to match existing.                             | sq<br>m | 35.02  |

| BW.68 | One course plain quarry tiles (any sizes) laid on cement mortar (1:3) with 10 mm joints in sills, weatherings or copings.                                                                                        | sq<br>m | 26.1  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| BW.69 | Two courses plain quarry tiles (any sizes) laid on cement mortar (1:3) with 10 mm joints in sills, weatherings or copings.                                                                                       | sq<br>m | 52.62 |
| BW.70 | Cut chases in existing rendered, tiled or fair face brickwork or concrete work, clear away debris and make existing in the following cross sections, not exceeding 2,500 sq mm.                                  | m       | 5.95  |
| BW.71 | Cut chases in existing rendered, tiled or fair face brickwork or concrete work, clear away debris and make existing in the following cross sections, over 2,500 and not exceeding 8,000 sq mm.                   | m       | 7.74  |
| BW.72 | Cut chases in existing rendered, tiled or fair face brickwork or concrete work, clear away debris and make existing in the following cross sections, over 8,000 and not exceeding 16,000 sq mm.                  | m       | 8.93  |
| BW.73 | Cut chases in existing rendered, tiled or fair face brickwork or concrete work, clear away debris and make existing in the following cross sections, over 16,000 and not exceeding 24,000 sq mm.                 | m       | 10.37 |
| BW.74 | Cut chases in existing rendered, tiled or fair face brickwork or concrete work, clear away debris and make existing in the following cross sections, over 24,000 and not exceeding 32,000 sq mm.                 | m       | 11.9  |
| BW.75 | Form holes for small pipe not exceeding 50 mm diameter in existing or new brickwork or blockwork not exceeding 65 mm thick, clear away debris and make good surrounds to match existing.                         | no      | 1.96  |
| BW.76 | Add for each additional stage of 25 mm thick wall, floor, etc. for item BW092.                                                                                                                                   | no      | 0.77  |
| BW.77 | Form holes for pipe exceeding 50 mm diameter and not exceeding 200 mm diameter in existing or new brickwork or blockwork not exceeding 65 mm thick, clear away debris and make good surrounds to match existing. | no      | 5.19  |

| BW.78 | Add for each additional stage of 25 mm thick wall, floor, etc. for item (BW094).                                                                                                   | no | 1.96  |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|-------|
| BW.79 | Cut small opening (ie not exceeding 0.50sq m) in existing or new brick or block walls not exceeding 150 mm thick (total thickness) and remove debris off site.                     | no | 14.71 |
| BW.80 | Add for each additional stage of 25 mm thick wall, floor, etc. for item (BW096).                                                                                                   | no | 2.47  |
| BW.81 | Cut large opening (ie exceeding 0.50sq m and not exceeding 2sq m) in existing or new brick or block walls not exceeding 150 mm thick (total thickness) and remove debris off site. | no | 47.35 |
| BW.82 | Add for each additional stage of 25 mm thick wall, floor, etc. for item (BW098).                                                                                                   | no | 2.98  |
| BW.83 | Below 25 mm diameter unplasticised PVC non-pressure pipe not exceeding 150 mm long with one end splayed and built in wall.                                                         | no | 1.36  |
| BW.84 | 25 mm to 50 mm diameter unplasticised PVC non-pressure pipe not exceeding 150 mm long with one end splayed and built in wall.                                                      | no | 2.04  |
| BW.85 | 50 mm to 75 mm diameter unplasticised PVC non-pressure pipe not exceeding 150 mm long with one end splayed and built in wall.                                                      | no | 2.98  |
| BW.86 | 75 mm to 100 mm diameter unplasticised PVC non-pressure pipe not exceeding 150 mm long with one end splayed and built in wall.                                                     | no | 4     |
| BW.87 | Add for each 25 mm in length for item BW100.                                                                                                                                       | no | 0.21  |

| BW.88 | Deduct for each 25 mm in length for item BW100.                                                                                                                 | no      | -0.17 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------|
| BW.89 | Add for each 25 mm in length for item BW101.                                                                                                                    | no      | 0.3   |
| BW.90 | Deduct for each 25 mm in length for item BW101.                                                                                                                 | no      | -0.26 |
| BW.91 | Add for each 25 mm in length for item BW102                                                                                                                     | no      | 0.38  |
| BW.92 | Deduct for each 25 mm in length for item BW102.                                                                                                                 | no      | -0.34 |
| BW.93 | Add for each 25 mm in length for item BW103.                                                                                                                    | no      | 0.6   |
| BW.94 | Deduct for each 25 mm in length for item BW103.                                                                                                                 | no      | -0.51 |
| BW.95 | 100 mm diameter clay earthenware weep pipes built in wall.                                                                                                      | m       | 18.36 |
| BW.96 | 150 mm diameter clay earthenware weep pipes built in wall.                                                                                                      | m       | 22.53 |
| BW.97 | Lay only 80 mm thick hollow glass block (any type) with approved horizontal joint reinforcing placed at every course including mortar and pointing with cement. | sq<br>m | 27.97 |

**BW-68** 

| BW.98  | Supply and lay 80 mm thick hollow glass block (any type) with approved horizontal joint reinforcing placed at every course including mortar and pointing with cement.                            | sq<br>m | 244.38 |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|--------|
| BW.99  | Lay only 100 mm thick hollow glass block (any type) with approved horizontal joint reinforcing placed at every course including mortar and pointing with cement.                                 | sq<br>m | 31.71  |
| BW.100 | Supply and lay 100 mm thick hollow glass block (any type) with approved horizontal joint reinforcing placed at every course including mortar and pointing with cement.                           | sq<br>m | 289.6  |
| BW.101 | Carefully remove existing glass bricks (any size) from 80 mm or 100 mm thick walls, vents, etc. clear off site or cart to store area or stack good bricks aside for re-use and cart away debris. | sq<br>m | 8.42   |
| BW.102 | Take from stack and rebuilt glass brick walls in cement mortar (1:6) and pointed in tinted cement as the work proceeds.                                                                          | sq<br>m | 23.97  |

# 4. AMENDMENTS TO THE TENDER DOCUMENTS

| S/No | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Unit | Unit Cost (\$) |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| RF.1 | 0.47mm high tensile profile patent/kliplok galvanized steel sheet roof decking, wall cladding,fascia. etc. fixed to timber or steel purlins or angle, rail etc. including all necessary fixing clips, screws, etc. and stop to open rib ends of deck, labour in flange bending to form turn- ups at ridge or turn-down at eaves, all cutting and waste, and all necessary materials, with the manufacturer's printed instructions (Net area measured).                                                              | sq m | 20.4           |
| RF.2 | 0.47 mm high tensile profile colourbond/colourcote steel sheet roof decking, wall cladding, fascia, etc. fixed to timber or steel purlins or angle, rail etc. including all necessary fixing clips, screws, etc. and stops to open rib ends of deck, labour in flange bending to form turn-ups at ridge or turn-down at eaves, all cutting and waste, and all necessary materials, equipment and labour for hoisting and fixing in accordance with the manufacturer's printed instructions.(Net area measured)      | sq m | 24.48          |
| RF.3 | 0.53 mm high tensile profile patent kliplock galvanized steel sheet roof decking, wall cladding fascia, etc. fixed to timber or steel purlins or angle, rail etc. including all necessary fixing clips, screws, etc. and stops to open rib ends of deck, labour in flange bending to form turn-ups at ridge or turn-down at eaves, all cutting and waste, and all necessary materials, equipment and labour for hoisting and fixing in accordance with the manufacturer's printed instructions. (Net area measured) | sq m | 25.5           |

| S/No  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Unit | Unit Cost (\$) |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| RF.4  | 0.53 mm high tensile profile colourbond/colourcote steel sheet roof decking, wall cladding fascia, etc. fixed to timber or steel purlins or angle, rail etc. including all necessary fixing clips, screws, etc. and stops to open rib ends of deck, labour in flange bending to form turn-ups at ridge or turn-down at eaves, all cutting and waste, and all necessary materials, equipment and labour for hoisting and fixing in accordance with the manufacturer's printed instructions.(Net area measured) | sq m | 28.05          |
| RF.5  | 0.65 mm profile patent galvanized kliplok steel roof decking, wall cladding fascia, etc. fixed to timber or steel purlins or angle, rail etc. including all necessary fixing clips, screws, etc. and stops to open rib ends of deck, labour in flange bending to form turn-ups at ridge or turn-down at eaves, all cutting and waste, and all necessary materials, equipment and labour for hoisting and fixing in accordance with the manufacturer's printed instructions.(Net area measured)                | sq m | 29.5           |
| RF.6  | 0.65 mm profile colourbond/colourcote steel roof decking, wall cladding fascia, etc. fixed to timber or steel purlins or angle, rail etc. including all necessary fixing clips, screws, etc. and stops to open rib ends of deck, labour in flange bending to form turn-ups at ridge or turn-down at eaves, all cutting and waste, and all necessary materials, equipment and labour for hoisting and fixing in accordance with the manufacturer's printed instructions.(Net area measured)                    | sq m | 33.58          |
| RF.7  | 0.75 mm profile patent galvanized kliplok sheet roof decking, wall cladding, fascia, etc. fixed to timber or steel purlins or angle, rail etc. including all necessary fixing clips, screws, etc. and stops to open rib ends of deck, labour in flange bending to form turn-ups at ridge or turn-down at eaves, all cutting and waste, and all necessary materials, equipment and labour for hoisting and fixing in accordance with the manufacturer's printed instructions.(Net area measured)               | sq m | 34.68          |
| RF.8  | 0.75 mm profile colourbond /colourcote sheet roof decking, wall cladding, fascia, etc. fixed to timber or steel purlins or angle, rail etc. including all necessary fixing clips, screws, etc. and stops to open rib ends of deck, labour in flange bending to form turn-ups at ridge or turn-down at eaves, all cutting and waste, and all necessary materials, equipment and labour for hoisting and fixing in accordance with the manufacturer's printed instructions. (Net area measured).                | sq m | 39.61          |
| RF.9  | Flashing for galvanized steel profile patterns roof including bending, joints, beaded edges, dressing, cutting chase in masonry work, ceiling chase with cementatious mortar, etc.                                                                                                                                                                                                                                                                                                                            | sq m | 39.1           |
| RF.10 | Flashing for colourbond/colourcote steel profile patterns roof including bending, joints, beaded edges, dressing, cutting chase in masonry work, ceiling chase with cementatious mortar, etc. (Net area measured).                                                                                                                                                                                                                                                                                            | sq m | 44.29          |
| RF.11 | Supply and install "Decrabond" flashing with baked enamel finish of girth 300 mm                                                                                                                                                                                                                                                                                                                                                                                                                              | m    | 12.58          |
| RF.12 | Supply and install "Decrabond" ridge and hip fitting with baked enamel finish                                                                                                                                                                                                                                                                                                                                                                                                                                 | m    | 12.24          |
| RF.13 | Used corrugated sheet fixed to purlins with one corrugation side laps and minimum 150 mm end laps as specified. (Net area measured).                                                                                                                                                                                                                                                                                                                                                                          | sq m | 5.27           |
| RF.14 | Approved non-abestos corrugated sheet fixed to purlins with one corrugation side laps and minium 150 mm end laps as specified. (Net area measured).                                                                                                                                                                                                                                                                                                                                                           | sq m | 18.36          |
| RF.15 | Used Pattern clay roofing tiles, best quality of approved brand, laid and fixed to existing timber battens and including wiring or nailing tiles to battens at every alternate course (Net area measured).                                                                                                                                                                                                                                                                                                    | sq m | 8.5            |

| S/No  | Description                                                                                                                                                                                                                                                                                                                                              | Unit | Unit Cost (\$) |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| RF.16 | Used Pattern clay roofing tiles, best quality of approved brand, laid and including new kapur battens with two coats of approved preservative coating and including wiring or nailing tiles to battens at every alternate course (Net area measured).                                                                                                    | sq m | 18.87          |
| RF.17 | Redland or other equal and approved ordinary colour (red, brown, grey) standard interlocking tiles to match existing if in replacement and laid on and including tantalized sawn kapur battens with copper nails at every alternate course (Net area measured).                                                                                          | sq m | 32.3           |
| RF.18 | Redland or other equal and approved ordinary colour (red, brown, grey) standard interlocking tiles to match existing if in replacement and laid on including new kapur battens with two coats of approved preservative coating and including tantalized sawn kapur battens with copper nails at every alternate course (Net area measured).              | sq m | 34.51          |
| RF.19 | Redland or other equal and approved ordinary colour (red, brown, grey) standard interlocking tiles to match existing if in replacement and laid on existing battens (Net area measured).                                                                                                                                                                 | sq m | 17.85          |
| RF.20 | Scantile panel or their equal and approved 0.66 mm thick high tensile steel continuous hot dipped galvanized with Kynar 500 Polyvbinlyidence (PVF2) coating fixed to timber or steel etc. including all necessary materials, equipment and labour for hoisting and fixing in accordance with the manufacturer's printed instructions (Net area measured) | sq m | 49.64          |
| RF.21 | Redland or other equal and approved special colour (green, yellow, white) standard interlocking tiles to match existing if in replacement and laid on and including tantalized sawn kapur battens with copper nails at every alternate course (Net area measured).                                                                                       | sq m | 33.32          |
| RF.22 | Redland or other equal and approved special colour (green, yellow, white) standard interlocking tiles to match existing if in replacement and laid on including new kapur battens with two coats of approved preservative coating and including tantalized sawn kapur battens with copper nails at every alternate course (Net area measured).           | sq m | 35.53          |
| RF.23 | Redland or other equal and approved special colour (green, yellow, white) standard interlocking tiles to match existing if in replacement and laid on existing battens (Net area measured).                                                                                                                                                              | sq m | 18.87          |
| RF.24 | Monier or other equal and approved ordinary colour pantile to match existing if in replacement and laid on and including tantalized sawn kapur battens, and nailing to battens with copper nails at every course (Net area measured).                                                                                                                    | sq m | 24.91          |
| RF.25 | Monier or other equal and approved ordinary colour pantile to match existing if in replacement and laid on and include new kapur battens with two coats of approved preservative coating and including tantalized sawn kapur battens, and nailing to battens with copper nails at every course (Net area measured).                                      | sq m | 27.54          |

| RF.96  | 0.75mm thick, 225 mm half-round gutter fabricated from stainless steel sheet complete with bends, stopped ends, balloons grating, outlets and fixing with and including brackets and connecting to existing gutters and rainwater downpipe (Rate Per Metre). | m    | 37.23          |
| RF.97  | 1mm thick, 225 mm half-round gutter fabricated from stainless steel sheet complete with bends, stopped ends, balloons grating, outlets and fixing with and including brackets and connecting to existing gutters and rainwater downpipe (Rate Per Metre).    | m    | 44.29          |
| RF.98  | 1.5mm thick, 225 mm half-round gutter fabricated from stainless steel sheet complete with bends, stopped ends, balloons grating, outlets and fixing with and including brackets and connecting to existing gutters and rainwater downpipe (Rate Per Metre).  | m    | 51.34          |
| RF.99  | Supply and install 100 mm diameter cast iron dome grating and fluted flange including joining to rainwater down pipes and setting in concrete slab to form a water tight joint                                                                               | no   | 24.31          |
| RF.100 | Supply and install 150 mm diameter cast iron dome grating and fluted flange including joining to rainwater down pipes and setting in concrete slab to form a water tight joint                                                                               | no   | 38.59          |
| RF.101 | Take out existing rainwater down pipes/scupper drain pipes (any type and size), remove off site and make good work disturbed including necessary cutting in position                                                                                         | m    | 0.94           |
| RF.102 | Take out existing metal holderbats for pipe, ( any diameter ) remove off site and make good work disturbed.                                                                                                                                                  | no   | 0.51           |
| RF.103 | Supply labour and all necessary tools for cleaning choked rain water down pipe/scupper drain pipe (rate per sta no Scaffolding to charge separately if exceeds one sty height.                                                                               |      |                |
| RF.104 | Supply and install 50 mm diameter UPVC scupper drain pipe/rainwater down pipe.                                                                                                                                                                               | m    | 8.67           |
| RF.105 | 75 mm diameter UPVC rainwater down pipe/scupper drain pipe ditto cement solvent joint including all necessary brackets or fixing straps, down spouts, joiners, elbows, shoes, etc.                                                                           | m    | 9.69           |
| RF.106 | 100 mm diameter UPVC rainwater down pipe/scupper drain pipe(any type and size), remove off site and make good work disturbed including necessary cutting in position.                                                                                        | m    | 11.73          |
| RF.107 | 150 mm diameter UPVC rainwater down pipe/scupper drain pipe(any type and size), remove off site and make good work disturbed including necessary cutting in position.                                                                                        | m    | 21.93          |
| RF.108 | 150 mm x 100 mm UPVC rainwater down pipe/scupper drain pipe(any type and size), remove off site and make good work disturbed including necessary cutting in position.                                                                                        | m    | 27.12          |
| RF.109 | Take out existing rainwater head (any type and size) and remove off site.                                                                                                                                                                                    | no   | 1.87           |
| RF.110 | Supply and install 75 mm diameter UPVC scupper drain cover to scupper drain outlet including jointing material.                                                                                                                                              | no   | 2.04           |
| RF.111 | Supply and install 100 mm diameter UPVC scupper drain cover to scupper drain outlet including jointing material.                                                                                                                                             | no   | 2.55           |
| RF.112 | Supply and install 75 mm diameter UPVC domed-shape drain cover to drain outlet.                                                                                                                                                                              | no   | 18.87          |
| RF.113 | Supply and install 100 mm diameter UPVC domed-shape drain cover to drain outlet.                                                                                                                                                                             | no   | 20.4           |

| S/No   | Description                                                                                                                                                                                                                                                                           | Unit | Unit Cost (\$) |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| RF.114 | Supply and install domed-shape roof outlet, diameter of 'A' measuring approximately 300 mm and rainwater down pipe 'B' measured at a range of 75 mm to 125 mm in diameter (Appendix 8).                                                                                               | no   | 142.8          |
| RF.115 | Fix only any size/shape outlet to roof                                                                                                                                                                                                                                                | no   | 2.04           |
| RF.116 | 6 mm thick steel roof trap door with 38 mm x 38 mm mild steel angle framing all round complete with hinges, hasp and staple (padlock measured separately) rest on and including 50 mm x 50 mm mild steel angle fixed to concrete work or the like and three coats painting.           | sq m | 235.28         |
| RF.117 | Take out and cart away existing trap roof door and make good work disturbed.                                                                                                                                                                                                          | sq m | 22.61          |
| RF.118 | Take out and recondition roof trap door.                                                                                                                                                                                                                                              | no   | 40.8           |
| RF.119 | Roof trap door with 18 mm thick water-proof plywood backing, and covered all round with 24 G aluminium sheeting, complete with hinges, hasp and staple (padlock measured) 50 mm x 50 mm x 6 mm mild steel angle fixed to concrete work or the like and three coats painting to angle. | sq m | 112.2          |
| RF.120 | Strip existing galvanized steel profiled sheeting including ridges and remove off site.                                                                                                                                                                                               | sq m | 1.19           |
| RF.121 | Strip existing Chinese tiles including ridge and hip tiles and remove off site.                                                                                                                                                                                                       | sq m | 0.85           |
| RF.122 | Strip existing Chinese tiles including ridge and hip tiles including battens and remove off site.                                                                                                                                                                                     | sq m | 1.45           |
| RF.123 | Strip existing corrugated non-asbestos or trafford type asbestos or including ridges and hips and remove off site.                                                                                                                                                                    | sq m | 0.68           |
| RF.124 | Strip existing corrugated metal, bituminous, PVC or Decrabond sheeting including ridges and hips and remove off site.                                                                                                                                                                 | sq m | 0.68           |
| RF.125 | Strip existing pattern clay, glass roofing tiles or concrete interlocking tiles including ridge and hip tiles and remove off site.                                                                                                                                                    | sq m | 0.85           |
| RF.126 | Strip existing pattern clay, glass roofing tiles or concrete interlocking tiles including ridge and hip tiles including battens and remove off site.                                                                                                                                  | sq m | 1.36           |
| RF.127 | Strip existing galvanized steel sheeting including ridges and carefully stack aside where directed for re-use.                                                                                                                                                                        | sq m | 1.62           |
| RF.128 | Strip existing Chinese tiles including ridges and hip tiles and carefully stack aside where directed for re-use.                                                                                                                                                                      | sq m | 1.11           |
| RF.129 | Strip existing Chinese tiles including ridges and hip tiles, including taking out battens and removing battens off site and carefully stack aside where directed for re-use.                                                                                                          | sq m | 1.7            |
| RF.130 | Strip existing corrugated non-asbestos or trafford type asbestos including ridges and hips and carefully stack aside where directed for re-use.                                                                                                                                       | sq m | 0.85           |
| RF.131 | Strip existing corrugated metal, bituminous, PVC or Decrabond sheeting including ridges and hips and carefully stack aside where directed for reuse.                                                                                                                                  | sq m | 0.85           |
| RF.132 | Strip existing pattern clay, glass roofing tiles or concrete interlocking tiles, pantiles, including ridges and hips and carefully stack aside where directed for re-use.                                                                                                             | sq m | 0.94           |
| RF.133 | Strip existing pattern clay, glass roofing tiles or concrete interlocking tiles, pantiles, including ridges and hips & including taking out battens and removing battens off site and carefully stack aside where directed for reuse.                                                 | sq m | 1.62           |

| S/No   | Description                                                                                                                                                                                                                                                                                                                                         | Unit | Unit Cost (\$) |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| RF.134 | Take from stack relay existing galvanized steel profiled pattern sheeting including ridges fixed with new clips, screws etc. where necessary. (New sheet measured separately).                                                                                                                                                                      | sq m | 3.49           |
| RF.135 | Take from stack relay existing Chinese tiles including ridge and hip tiles and filling and pointing ends of crowns of tiles with cement mortar (1:3) at 1000 mm intervals. (New sheet measured separately).                                                                                                                                         | sq m | 4.25           |
| RF.136 | Take from stack relay existing Chinese tiles including ridge and hip tiles and filling and pointing ends of crowns of tiles with cement mortar (1:3) at 1000 mm intervals including new kapur battens with two coats of approved preservative coating. (New sheet measured separately).                                                             | sq m | 23.12          |
| RF.137 | Take from stack relay existing non-asbestos (any type) metal, bituminous, PVC or Decrabondinterlocking roofing tiles laid with adequate side and end laps fixed with new galvanized drive nails and washers or new galvanized hook bolts and washers. (New sheet measured separately).                                                              | sq m | 4.42           |
| RF.138 | Take from stack relay existing non- asbestos (any type) metal, bituminous, PVC or Decrabond interlocking roofing tiles laid with adequate side and end laps fixed with new galvanized drive nails and washers or new galvanized hook bolts and washers including bedding side and end laps with approved adhesive. (New sheet measured separately). | sq m | 9.52           |
| RF.139 | Take from stack relay existing pattern clay tile, glass roofing tile, concrete standard interlocking tile or concrete pantile including new copper nails. (New sheet measured separately).                                                                                                                                                          | sq m | 4.42           |
| RF.140 | Take from stack relay existing pattern clay tile, glass roofing tile, concrete standard interlocking tile or concrete pantile including new copper nails including new kapur battens with two coats of approved preservative coating. (New sheet measured separately).                                                                              | sq m | 22.87          |
| RF.141 | Take from stack relay existing clay or concrete ridge/ hip tiles including bedding and pointing in cement mortar (1:3). (New sheet measured separately).                                                                                                                                                                                            | m    | 3.15           |
| RF.142 | Take from stack relay existing cement or metal or bituminous or Decrabond ridges and hips fixed complete. (New sheet measured separately).                                                                                                                                                                                                          | m    | 5.02           |
| RF.143 | Supply and installation of 50mm thick Insulfoam MRB-32 or other equal and approved moulded expanded polystyrene board (laid to falls) with self-interlocking system as described laid in strict accordance with Manufacturer's instructions                                                                                                         | sq m | 21.42          |
| RF.144 | Saturated bitumen two-ply felt as specified in two layer weighing 35.5 kg per 20 sq m roll laid, sealed and bonded with hot bitumen on flat roofs (net area measured).                                                                                                                                                                              | sq m | 11.22          |
| RF.145 | Saturated bitumen two-ply felt as specified in two layer weighing 35.5 kg per 20sq m roll laid, sealed and bonded with hot bitumen on flat roofs in skirting, upstands, eaves, edges, gutters, etc. (net area measured).                                                                                                                            | sq m | 19.55          |
| RF.146 | Saturated bitumen two-ply felt as specified in one layer weighing 35.5 kg per 20sq m roll laid, sealed and bonded with hot bitumen on flat roofs (net area measured).                                                                                                                                                                               | sq m | 6.55           |
| RF.147 | Saturated bitumen one-ply felt as specified in one layer weighing 35.5 kg per 20sq m roll laid, sealed and bonded with hot bitumen on flat roofs in skirting, upstands, eaves, edges, gutters (net area measured).                                                                                                                                  | sq m | 11.31          |
| RF.148 | Saturated bitumen one-ply felt as specified weighing 17.75 kg per 20sq m roll laid, sealed and bonded with hot bitumen on roofs (net area measured).                                                                                                                                                                                                | sq m | 5.7            |

| S/No   | Description                                                                                                                                                                                                                                                                                       | Unit | Unit Cost (\$) |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| RF.149 | Saturated bitumen one-ply felt as specified weighing 17.75 kg per 20sq m roll laid, sealed and bonded with hot bitumen on roofs in skirting, upstands, eaves, edges, gutters (net area measured).                                                                                                 | sq m | 10.63          |
| RF.150 | Extra labour and material to dressing to outlets fitting etc.                                                                                                                                                                                                                                     | no   | 19.38          |
| RF.151 | 6 mm thick layer of granite chips (3 mm size) laid shoulder to shoulder on and including hot bitumen dressing compound to flat roofs.                                                                                                                                                             | sq m | 2.55           |
| RF.152 | One coat of hot bituminous compound laid at 1.5 kg per 10sq m.                                                                                                                                                                                                                                    | sq m | 1.7            |
| RF.153 | Supply and lay ONE layer of 4mm thick "Torch On" waterproofing membrance on concrete flat roof including one coat of bitumen black primer and 150mm height upturn for skirting.                                                                                                                   | sq m | 20.4           |
| RF.154 | Patent panel roofing comprising three layers bituminous felt, the first and second layers each weighing 27 kg per 20sq m roll (1 ply) and the third layer weighing 45 kg per 20sq m roll (3 ply) laid on flat roof in accordance with specialist recommendations.                                 | sq m | 16.92          |
| RF.155 | Patent panel roofing comprising three layers bituminuos felt,the first and second layers each weighing 27 kg per 20sq m roll (1 ply) and the third layer weighing 45 kg per 20sq m roll (3 ply) laid in skirting, upstands, eaves, edges, gutters, etc.                                           | sq m | 30.43          |
| RF.156 | Average 25 mm thick waterproof cement and sand (1:3) topping laid in panels of 750 x 750 mm to slope or flat roof all in accordance with specialist recommendation including steel trowelled and finished to falls.                                                                               | sq m | 15.9           |
| RF.157 | Average 25 mm thick waterproof cement and sand (1:3) topping laid in panels of 750 x 750 mm to slope or flat roof all in accordance with specialist recommendation including steel trowelled and finished to falls in skirting, upstands, eaves, edges, gutters, etc.                             | sq m | 20.74          |
| RF.158 | Add for each additional 5 mm thick waterproof of cement and sand topping as before described.                                                                                                                                                                                                     | sq m | 2.64           |
| RF.159 | Remove existing felt roofing including chipping, if any. Prepare surface to receive new and debris off site.                                                                                                                                                                                      | sq m | 3.57           |
| RF.160 | Remove existing cement panels and if necessary prepare surface to receive new and debris off site.                                                                                                                                                                                                | sq m | 5.1            |
| RF.161 | Hack up existing cement panels and make good in patches, each patch not exceeding 2 panels and 25 mm thick and debris off site (rate per patch).                                                                                                                                                  | no   | 3.4            |
| RF.162 | Hack up existing cement panels and make good in patches, each patch not exceeding 2 panels and 25 mm thick including replacement of 3 layers roofing felts as before specified and cement panels in patches and debris off site (rate per patch).                                                 | no   | 40.21          |
| RF.163 | Approved bituminous liquid solution fillings to expansion joints of panel roofing, crevices, cracks, etc. approximately 15 mm wide x 22 mm deep to panel roofing including forming groove if necessary.                                                                                           | m    | 1.11           |
| RF.164 | Approved bituminous liquid solution fillings to expansion joints of panel roofing, crevices, cracks, etc. approximately 15 mm wide x 22 mm deep to panel roofing including forming groove if necessary, in replacement including hacking existing fillings and carting away debris on completion. | m    | 1.87           |
| RF.165 | Investigate and cure leak in tiled roof including providing new tiles not exceeding 0.50sq m in area to match existing for 1st spot of leak (NOTE: Individual block of building considered separately).                                                                                           | no   | 24.48          |
| RF.166 | Investigate and cure leak in tiled roof including providing new tiles not exceeding 0.50sq m in area to match existing for each additional spot of leak (NOTE: Individual block of building considered separately).                                                                               | no   | 14.62          |

| S/No   | Description                                                                                                                                                                                                                                                                       | Unit | Unit Cost (\$) |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| RF.167 | Seal existing nail or bolts heads with bituminous sealing compound on corrugated roofing sheets (Measured net area from mid-point of nail heads).                                                                                                                                 | sq m | 1.36           |
| RF.168 | Seal existing nail or bolts heads with liquid-applied membrane of heavy duty acrylic polymer reinforced fiber glass on corrugated roofing sheets (Measured net area from mid-point of nail heads).                                                                                | sq m | 4.08           |
| RF.169 | Seal existing side and end laps with bituminous sealing compound irrespective of girth inclusive of cement mortar where necessary.                                                                                                                                                | m    | 1.36           |
| RF.170 | Seal existing side and end laps with liquid applied membrane of heavy duty acrylic polymer reinforced by fiber glass.                                                                                                                                                             | m    | 4.25           |
| RF.171 | Supply labour and material to bend deck flange at existing metal roof decking.                                                                                                                                                                                                    | m    | 2.47           |
| RF.172 | Take out existing roof sheeting, seal side and end laps with sealing compound and relay including new drive nails and washers or hook bolts and washers (new roof sheeting measured separately).                                                                                  | sq m | 10.29          |
| RF.173 | Remove existing dead light including frame, glass, etc. and make good to surrounds to receive new, or tiles or roofing sheets to match existing and including removing debris off site (Tiles, roofing sheets and extra roofing joists measured separately).                      | sq m | 22.02          |
| RF.174 | Remove existing latern light including frame, glass, etc. and make good to surrounds to receive new, or tiles or roofing sheets to match existing and including removing debris off site (Tiles, roofing sheets and extra roofing joists measured separately) (measured on plan). | sq m | 33.07          |
| RF.175 | Supply and fix 16 mm diameter steel sag rod exceeding 500 mm and n.e. 800 m long including bolts, nuts and washers.                                                                                                                                                               | no   | 6.72           |
| RF.176 | Supply and install 150 mm wide "Emfiband" to roof.                                                                                                                                                                                                                                | m    | 8.67           |
| RF.177 | Formstar clear/coloured weather proof coatings system on flat surfaces laid to fall not exceeding 50sq m.                                                                                                                                                                         | sq m | 17.17          |
| RF.178 | Formstar clear/coloured weather proof coatings system on flat surfaces laid to fall exceeding 50sq m.                                                                                                                                                                             | sq m | 15.81          |
| RF.179 | Formstar clear/coloured weather proof coatings system on wall, parapet wall, plinth gutter, skirting, upstand and the like exceeding 150 mm girth.                                                                                                                                | sq m | 17.85          |
| RF.180 | Prepare new roof decking and apply 2 coats of Flinkote PF 4 or Shellkote Type 3.                                                                                                                                                                                                  | sq m | 7.74           |
| RF.181 | Prepare new metal or concrete roof decking and apply 2 coats of bitumen solution and 2 coats santex-matt coating.                                                                                                                                                                 | sq m | 9.01           |
| RF.182 | Prepare existing metal or concrete roof decking previously painted with sandtex-matt coating, clean and apply 2 coats of sandtex-matt coating.                                                                                                                                    | sq m | 7.74           |
| RF.183 | Prepare new wall cladding and apply 2 coats of Flinkote PF 4 or Shellkote Type 3.                                                                                                                                                                                                 | sq m | 8.25           |
| RF.184 | Prepare new wall cladding and apply 2 coats of bitumen solution and 2 coats santex-matt coating.                                                                                                                                                                                  | sq m | 9.52           |
| RF.185 | Prepare existing wall cladding previously painted with sandtex-matt coating, clean and apply 2 coats of sandtex-matt coating.                                                                                                                                                     | sq m | 8.25           |
| RF.186 | Brush down and apply one coat of approved bituminous base aluminium solution formulated with high grade bitumen and finely divided aluminium on surfaces of roofing felt, asphalt, concrete, etc.                                                                                 | sq m | 4.68           |
| RF.187 | Brush down and apply 3 coats of rubberized flat paint on cement rendering surface                                                                                                                                                                                                 | sq m | 14.71          |
| RF.188 | Prepare existing surfaces of cement rendering, etc. and wash down to receive finishing.                                                                                                                                                                                           | sq m | 1.45           |

| S/No   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Unit | Unit Cost (\$) |

| RF.290 | On flat surfaces laid to fall exceeding 50sq m, 4mm "Impec" Roof Covering System.                                                                                                     | sq m | 18.36          |
| RF.291 | On flat surfaces laid to fall exceeding 50sq m, 4.5 mm thick "Imper" Mineral Green Roof Covering System.                                                                              | sq m | 19.89          |
| RF.292 | Supply & lay on wall, parapet wall, conc. Plinth, rc gutter, skirting, upstands and the like exceeding 50sq m, "Chevaline Dexx" Liquid Applied Membrane Roof Covering System.         | sq m | 27.54          |
| RF.293 | Supply & lay on wall, parapet wall, conc. Plinth, rc gutter, skirting, upstands and the like exceeding 50sq m, "Vulken 801" Liquid Applied Elastomeric Membrane Roof Covering System. | sq m | 28.39          |
| RF.294 | Supply & lay on wall, parapet wall, conc. Plinth, rc gutter, skirting, upstands and the like exceeding 50sq m, 2 mm thick "L & M Santac" Sheet.                                       | sq m | 44.29          |
| RF.295 | Supply & lay on wall, parapet wall, conc. Plinth, rc gutter, skirting, upstands and the like exceeding 50sq m, 3mm "Impec" Roof Covering System.                                      | sq m | 44.8           |
| RF.296 | Supply & lay on wall, parapet wall, conc. Plinth, rc gutter, skirting, upstands and the like exceeding 50sq m, 4mm "Impec" Roof Covering System.                                      | sq m | 20.4           |
| RF.297 | Supply & lay on wall, parapet wall, conc. Plinth, rc gutter, skirting, upstands and the like exceeding 50sq m, 4.5 mm thick "Imper" Mineral Green Roof Covering System.               | sq m | 21.93          |
| RF.298 | Dressing around vent pipes/rainwater outlets and the like, "Chevaline Dexx" Liquid Applied Membrane Roof Covering System.                                                             | sq m | 29.58          |
| RF.299 | Dressing around vent pipes/rainwater outlets and the like, "Vulken 801" Liquid Applied Elastomeric Membrane Roof Covering System.                                                     | sq m | 18.53          |
| RF.300 | Dressing around vent pipes/rainwater outlets and the like, 2 mm thick "L $\&$ M Santac" Sheet.                                                                                        | sq m | 9.35           |
| RF.301 | Dressing around vent pipes/rainwater outlets and the like, 3mm "Impec" Roof Covering System.                                                                                          | sq m | 15.3           |
| RF.302 | Dressing around vent pipes/rainwater outlets and the like, 4mm "Impec" Roof Covering System.                                                                                          | sq m | 14.79          |
| RF.303 | Dressing around vent pipes/rainwater outlets and the like, 4.5 mm thick "Imper" Mineral Green Roof Covering System.                                                                   | sq m | 14.79          |

# 5. CARPENTER

| S/No | Description                  | Unit | Unit Cost (\$) |
|------|------------------------------|------|----------------|
| CP.1 | Timber fixed in sawn Chengal | cu m | 487.14         |
| CP.2 | Timber fixed in wrot Chengal | cu m | 2550           |
| CP.3 | Timber fixed in sawn Kapur   | cu m | 1462.6         |
| CP.4 | Timber fixed in wrot Kapur   | cu m | 1632           |
| CP.5 | Timber fixed in sawn Balau   | cu m | 1805.06        |
| CP.6 | Timber fixed in wrot Balau   | cu m | 2150.5         |
| CP.7 | Timber fixed in sawn Keruing | cu m | 1215.5         |

| S/No  | Description                                                                                                                                                                                                          | Unit | Unit Cost (\$) |
|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.8  | Timber fixed in wrot Keruing                                                                                                                                                                                         | cu m | 1402.5         |
| CP.9  | Timber fixed in sawn Kempas                                                                                                                                                                                          | cu m | 1178.7         |
| CP.10 | Timber fixed in wrot Kempas                                                                                                                                                                                          | cu m | 1309           |
| CP.11 | Add to items (CP001) to (CP005) above if in prefabricated roof trusses for transporting, hoisting and fixing in position not exceeding 6 m high and including bolts, screws, fixing plates etc.                      | cu m | 180.03         |
| CP.12 | Add to items (CP001) to (CP005) above if in prefabricated roof trusses for transporting, hoisting and fixing in position exceeding 6 m and not exceeding 9m high and including bolts, screws, fixing plates etc.     | cu m | 189.04         |
| CP.13 | Add to items (CP001) to (CP005) above if in prefabricated roof trusses for transporting, hoisting and fixing in position exceeding 9 m and not exceeding 12m high and including bolts, screws, fixing plates etc.    | cu m | 198.05         |
| CP.14 | Add to items (CP001) to (CP005) above if fixed in repairs to replace old and decayed timber, remove off site and including all strutting, steel straps splicing etc and making good damaged or missing.              | cu m | 224.4          |
| CP.15 | Add to items (CP001) to (CP005) if pressure impregnated timber is used.                                                                                                                                              | cu m | 92.48          |
| CP.16 | Extra over structural timber for pressure impregnation with a suitable wood preservative to an average dry sact retention of 5.6 kg/cu m and complying with SS 72 and treated in accordance with SS CP1.             | cu m | 62.65          |
| CP.17 | 19mm wrot plain Chengal square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately) | sq m | 41.14          |
| CP.18 | 25mm wrot plain Chengal square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately) | sq m | 47.69          |
| CP.19 | 28mm wrot plain Chengal square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately) | sq m | 52.36          |
| CP.20 | 38mm wrot plain Chengal square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately) | sq m | 61.71          |
| CP.21 | 19mm wrot plain Kapur square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)   | sq m | 31.88          |
| CP.22 | 25mm wrot plain Kapur square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)   | sq m | 36.04          |
| CP.23 | 28mm wrot plain Kapur square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)   | sq m | 37.4           |
| CP.24 | 38mm wrot plain Kapur square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)   | sq m | 41.14          |
| CP.25 | 19mm wrot plain Balau square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)   | sq m | 23.38          |

| S/No  | Description                                                                                                                                                                                                                  | Unit | Unit Cost (\$) |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.26 | 25mm wrot plain Balau square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)           | sq m | 38.34          |
| CP.27 | 28mm wrot plain Balau square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)           | sq m | 44.88          |
| CP.28 | 38mm wrot plain Balau square edge boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)           | sq m | 48.62          |
| CP.29 | Take out existing plain edge board (any thickness) and remove off site.                                                                                                                                                      | sq m | 2.13           |
| CP.30 | Take out existing plain edge board (any thickness) in floor, partition, table top, fitment, etc relay and recramp (bearer and new boarding measured separately).                                                             | sq m | 7.23           |
| CP.31 | 50 x 25mm sawn kapur, balau or keruing battens for tiles including tanalising or two coats wood preservative and removal of old battens if necessary                                                                         | m    | 1.45           |
| CP.32 | 50 x 40mm sawn kapur, balau or keruing battens for tiles including tanalising or two coats wood preservative and removal of old battens if necessary                                                                         | m    | 1.87           |
| CP.33 | 75 x 25mm sawn kapur, balau or keruing battens for tiles including tanalising or two coats wood preservative and removal of old battens if necessary                                                                         | m    | 2.04           |
| CP.34 | Fascia or barge boards including taking down existing members.                                                                                                                                                               | cu m | 955.57         |
| CP.35 | 13mm thick wrot Chengal tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in                                                                                      | sq m |                |
|       | patches) well cramped up, nailed or screwed to bearers (bearers measured separately)                                                                                                                                         |      | 38.25          |
| CP.36 | 19mm thick wrot Chengal tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers                      | sq m | 47.69          |
| CP.37 | measured separately) 25mm thick wrot Chengal tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in                                                                 | sq m |                |
| CD 20 | patches) well cramped up, nailed or screwed to bearers (bearers measured separately)                                                                                                                                         |      | 55.17          |
| CP.38 | 28mm thick wrot Chengal tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately) | sq m | 60.78          |
| CP.39 | 38mm thick wrot Chengal tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers                      | sq m | 72             |
| CP.40 | measured separately) 13mm thick wrot Kapur tongued and grooved boarding to floors, shelves,                                                                                                                                  | sq m |                |
|       | fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)                                                                          |      | 28.05          |
| CP.41 | 19mm thick wrot Kapur tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)   | sq m | 36.47          |

| S/No  | Description                                                                                                                                                                                                                                                               | Unit | Unit Cost (\$) |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.42 | 25mm thick wrot Kapur tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)                                                | sq m | 42.08          |

| CP.46 | 19mm thick wrot Balau tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)                                                | sq m | 28.99          |
| CP.47 | 25mm thick wrot Balau tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)                                                | sq m | 44.88          |
| CP.48 | 28mm thick wrot Balau tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)                                                | sq m | 50.49          |
| CP.49 | 38mm thick wrot Balau tongued and grooved boarding to floors, shelves, fitments, partitions, ceiling, etc in new or existing work (in patches) well cramped up, nailed or screwed to bearers (bearers measured separately)                                                | sq m | 57.97          |
| CP.50 | Take out existing tongued and grooved boarding (any thickness) and remove off site.                                                                                                                                                                                       | sq m | 2.55           |
| CP.51 | Extra over for pressure impreganted timber boards (any thickness).                                                                                                                                                                                                        | sq m | 2.21           |
| CP.52 | 20mm thick tongued and grooved ramin boarding including sanding and polishing surface all according to specialist's instructions.                                                                                                                                         | sq m | 89.76          |
| CP.53 | 20mm thick tongued and grooved ramin boarding including sanding and polishing surface all according to specialist's instructions including bearers below.                                                                                                                 | sq m | 94.44          |
| CP.54 | Sawn Kapur, ledged and braced shutters or doors with 19mm butt jointed boarding on 19 mm ledges and braces hung in frames.(Rate does not include framess, glazing, wire gauze and ironmongery)                                                                            | sq m | 55.34          |
| CP.55 | Wrot Kapur, ledged and braced shutters or doors with 19mm butt jointed boarding on 19 mm ledges and braces hung in frames. (Rate does not include framess, glazing, wire gauze and ironmongery)                                                                           | sq m | 68.09          |
| CP.56 | 25mm thick wrot Chengal framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of tongued, grooved and v-jointed match boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames. | sq m | 116.88         |
| CP.57 | 38mm thick wrot Chengal framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of tongued, grooved and v-jointed match boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames. | sq m | 136.51         |
| CP.58 | 44mm thick wrot Chengal framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of tongued, grooved and v-jointed match boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames. | sq m | 145.86         |

| S/No  | Description                                                                                                                                                                                                                                                               | Unit | Unit Cost (\$) |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.59 | 50mm thick wrot Chengal framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of tongued, grooved and v-jointed match boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames. | sq m | 149.6          |
| CP.60 | 25mm thick wrot Kapur framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of tongued, grooved and v-jointed match boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.   | sq m | 82.28          |
| CP.61 | 38mm thick wrot Kapur framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of tongued, grooved and v-jointed match boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.   | sq m | 96.31          |
| CP.62 | 44mm thick wrot Kapur framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of tongued, grooved and v-jointed match boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.   | sq m | 101.92         |
| CP.63 | 50mm thick wrot Kapur framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of tongued, grooved and v-jointed match boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.   | sq m | 110.33         |
| CP.64 | 25mm thick wrot Chengal framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of butt jointed boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.                         | sq m | 110.33         |
| CP.65 | 38mm thick wrot Chengal framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of butt jointed boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.                         | sq m | 126.23         |
| CP.66 | 44mm thick wrot Chengal framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of butt jointed boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.                         | sq m | 130.9          |
| CP.67 | 50mm thick wrot Chengal framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of butt jointed boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.                         | sq m | 134.64         |
| CP.68 | 25mm thick wrot Kapur framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of butt jointed boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.                           | sq m | 70.13          |
| CP.69 | 38mm thick wrot Kapur framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of butt jointed boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.                           | sq m | 86.02          |
| CP.70 | 44mm thick wrot Kapur framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of butt jointed boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.                           | sq m | 91.63          |
| CP.71 | 50mm thick wrot Kapur framed, ledged and braced shutters or doors (partly glazed if necessary) comprising of butt jointed boarding fixed to frames, ledges and braces to make up the total thickness stated including hanging onto door frames.                           | sq m | 100.05         |

| CP.88 | 38mm thick Chengal louvred casement or comprising of twice splayed louvres fixed at an angle of 60 degrees not more than 40mm apart and rebated and moulded and stiles including hanging onto frames.                                                                | sq m | 94.44          |
| CP.89 | 44 mm thick Chengal louvred casement or comprising of twice splayed louvres fixed at an angle of 60 degrees not more than 40mm apart and rebated and moulded and stiles including hanging onto frames.                                                               | sq m | 100.05         |
| CP.90 | 50 mm thick Chengal louvred casement or comprising of twice splayed louvres fixed at an angle of 60 degrees not more than 40mm apart and rebated and moulded and stiles including hanging onto frames.                                                               | sq m | 103.79         |
| CP.91 | 38mm thick Kapur louvred casement or comprising of twice splayed louvres fixed at an angle of 60 degrees not more than 40mm apart and rebated and moulded and stiles including hanging onto frames.                                                                  | sq m | 74.8           |
| CP.92 | 44 mm thick Kapur louvred casement or comprising of twice splayed louvres fixed at an angle of 60 degrees not more than 40mm apart and rebated and moulded and stiles including hanging onto frames.                                                                 | sq m | 78.54          |
| CP.93 | 50 mm thick Kapur louvred casement or comprising of twice splayed louvres fixed at an angle of 60 degrees not more than 40mm apart and rebated and moulded and stiles including hanging onto frames.                                                                 | sq m | 79.48          |
| CP.94 | 21mm thick covered on both sides with 4 mm thick waterproof plywood hollow flush door or cupboard door comprising of kapur skeleton framing and lipping all round including hanging onto door frames                                                                 | sq m | 43.35          |
| CP.95 | 27mm thick covered on both sides with 6 mm thick waterproof plywood hollow flush door or cupboard door comprising of kapur skeleton framing and lipping all round including hanging onto door frames                                                                 | sq m | 70.13          |
| CP.96 | 31mm thick covered on both sides with 6 mm thick waterproof plywood hollow flush door or cupboard door comprising of kapur skeleton framing and lipping all round including hanging onto door frames                                                                 | sq m | 74.8           |
| CP.97 | 40mm thick covered on both sides with 6 mm thick waterproof plywood hollow flush door or cupboard door comprising of kapur skeleton framing and lipping all round including hanging onto door frames                                                                 | sq m | 84.15          |

| S/No   | Description                                                                                                                                                                                                  | Unit | Unit Cost (\$) |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.98  | 43mm thick covered on both sides with 9 mm thick waterproof plywood hollow flush door or cupboard door comprising of kapur skeleton framing and lipping all round including hanging onto door frames         | sq m | 93.5           |
| CP.99  | 37mm thick Kapur hollow flush door comprising of Kapur skeleton framing and lipping all round covered on both sides with waterproof plywood as shown in Appendices 9/10/11including hanging onto door frames | sq m | 78.54          |
| CP.100 | 43mm thick Kapur hollow flush door comprising of Kapur skeleton framing and lipping all round covered on both sides with waterproof plywood as shown in Appendices 9/10/11including hanging onto door frames | sq m | 82.28          |
| CP.101 | 48mm thick Kapur hollow flush door comprising of Kapur skeleton framing and lipping all round covered on both sides with waterproof plywood as shown in Appendices 9/10/11including hanging onto door frames | sq m | 85.43          |
| CP.102 | Extra over above items (CP073 to CP080) for constructing fixed aluminium louvre as shown in Appendices 10C/10D/12/14                                                                                         | sq m | 9.86           |
| CP.103 | Extra over above items (CP073 to CP080) for glazed peephole as shown in Appendices 10A/10B/10C/13/14                                                                                                         | sq m | 5.87           |
| CP.104 | 39mm thick Kapur semi-flush door comprising of hardwood skeleton framing lipping all round including hanging onto door frame including rebated V-jointed Kapur panel as shown in Appendix 15                 | sq m | 93.33          |
| CP.105 | 48mm thick Kapur semi-flush door comprising of hardwood skeleton framing lipping all round including hanging onto door frame including rebated V-jointed Kapur panel as shown in Appendix 15                 | sq m | 100.13         |
| CP.106 | 39mm thick Chengal semi-flush comprising of hardwood skeleton framing lipping all round including hanging onto door frame including rebated V-jointed Chengal panel as shown in Appendix 15                  | sq m | 142.38         |
| CP.107 | 48mm thick Chengal semi-flush door comprising of hardwood skeleton framing lipping all round including hanging onto door frame including rebated V-jointed Chengal panel as shown in Appendix 15             | sq m | 155.13         |
| CP.108 | 38 mm thick Kapur solid core flush door as shown in Appendix 16 comprising of hardwood lipping all round, core strips, plywood and reinforcing bars including hanging onto door frames                       | sq m | 191.25         |
| CP.109 | 50 mm thick Kapur solid core flush door as shown in Appendix 16 comprising of hardwood lipping all round, core strips, plywood and reinforcing bars including hanging onto door frames                       | sq m | 242.25         |
| CP.110 | 38 mm thick Chengal solid core flush door as shown in Appendix 16 comprising of hardwood lipping all round, core strips, plywood and reinforcing bars including hanging onto door frames                     | sq m | 246.5          |
| CP.111 | 50 mm thick Chengal solid core flush door as shown in Appendix 16 comprising of hardwood lipping all round, core strips, plywood and reinforcing bars including hanging onto door frames                     | sq m | 250.75         |
| CP.112 | 38 mm thick Kapur solid panel door as shown in Appendix 17 comprising tongued and grooved battens including reinforcing bars, and hanging onto door frames                                                   | sq m | 193.8          |
| CP.113 | 50 mm thick Kapur solid panel door as shown in Appendix 17 comprising tongued and grooved battens including reinforcing bars, and hanging onto door frames                                                   | sq m | 263.5          |
| CP.114 | 38 mm thick Chengal solid panel door as shown in Appendix 17 comprising tongued and grooved battens including reinforcing bars, and hanging onto door frames                                                 | sq m | 318.75         |
| CP.115 | 50 mm thick Chengal solid panel door as shown in Appendix 17 comprising tongued and grooved battens including reinforcing bars, and hanging onto door frames                                                 | sq m | 327.25         |

| S/No   | Description                                                                                                                                                                                                                       | Unit | Unit Cost (\$) |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.116 | 38mm thick Kapur solid panel door including glazed panel as shown in Appendix 18 comprising tongued and grooved battens including reinforcing bars, and hanging onto door frames.                                                 | sq m | 199.75         |
| CP.117 | 50mm thick Kapur solid panel door including glazed panel as shown in Appendix 18 comprising tongued and grooved battens including reinforcing bars, and hanging onto door frames.                                                 | sq m | 272            |
| CP.118 | 38mm thick Chengal solid panel door including glazed panel as shown in Appendix 18 comprising tongued and grooved battens including reinforcing bars, and hanging onto door frames.                                               | sq m | 327.25         |
| CP.119 | 50mm thick Chengal solid panel door including glazed panel as shown in Appendix 18 comprising tongued and grooved battens including reinforcing bars, and hanging onto door frames.                                               | sq m | 333.2          |
| CP.120 | Supply and install approved PVC folding door                                                                                                                                                                                      | sq m | 93.5           |
| CP.121 | Supply and install approved UPVC flush door c/w approved lock and hinges.                                                                                                                                                         | sq m | 98.69          |
| CP.122 | Supply and install a complete set of UPVC door frame.                                                                                                                                                                             | set  | 126.23         |
| CP.123 | 900 x 2100 x 45mm thick, single leaf, Polynorm 1/2 hour rated timber fire door complying with SS 332 complete with fire proofed cylinder lockset, stainless steel ball bearing hinges, flush bolt, door closer and frame          | no   | 794.75         |
| CP.124 | 900 x 2100 x 46mm thick, single leaf, Pyropanel 1/2 hour rated timber fire door complying with SS 332 complete with fire proofed cylinder lockset, stainless steel ball bearing hinges, flush bolt, door closer and frame         | no   | 841.5          |
| CP.125 | 1200 x 2100 x 45mm thick, double unequal leaf, Polynorm 1/2 hour rated timber fire door complying with SS 332 complete with fire proofed cylinder lockset, stainless steel ball bearing hinges, flush bolt, door closer and frame | no   | 1383.8         |
| CP.126 | 1200 x 2100 x 48mm thick, double unequal leaf, Pyropanel 1/2 hour rated timber fire door complying with SS 332 complete with fire proofed cylinder lockset, stainless steel ball bearing hinges, flush bolt, door closer          | no   | 1075.25        |
| CP.127 | and frame 900 x 2100 x 48mm thick, single leaf, Pyropanel 1 hour rated timber fire door complying with SS 332 complete with fire proofed cylinder lockset, stainless steel ball bearing hinges, flush bolt, door closer and frame | no   | 1093.02        |
| CP.128 | 1200 x 2100 x 48 mm thick, single leaf, Pyropanel 1 hour rated timber fire door complying with SS 332 complete with fire proofed cylinder lockset, stainless steel ball bearing hinges, flush bolt, door closer and frame         | no   | 1269.73        |
| CP.129 | 900 x 2100 x 48mm thick, single leaf, Pyropanel 2 hour rated timber fire door complying with SS 332 complete with fire proofed cylinder lockset, stainless steel ball bearing hinges, flush bolt, door closer and frame           | no   | 1205.22        |
| CP.130 | 2100 x 2100 x 48mm thick, double unequal leaf, Pyropanel 2 hour rated timber fire door complying with SS 332 complete with fire proofed cylinder lockset, stainless steel ball bearing hinges, flush bolt, door closer            | no   | 1398.76        |
| CP.131 | and frame 900x2400x50mm thk,single leaf laminated semi-solid timber flush door with complete ironmongeries (except lockset)                                                                                                       | no   | 578            |
| CP.132 | 1200x2150x50mm thk,11/4 leaf laminated semi-solid timber flush door                                                                                                                                                               | no   | 773.5          |
| CP.133 | with complete ironmongeries (except lockset)  1800x2400x50mm thk,double equal leaf laminated semi-solid timber door with complete ironmongery (except lockset)                                                                    | no   | 884            |
| CP.134 | Supply and fix 36 mm approved fibreglass door c/w approved lock and hinges.                                                                                                                                                       | sq m | 123.42         |

| CP.181 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Kapur timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 2,000sq mm and not exceeding 4,000sq mm cross-sectional area)   | m    | 11.48          |
| CP.182 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Chengal timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 2,000sq mm and not exceeding 4,000sq mm cross-sectional area) | m    | 12.67          |

| S/No   | Description                                                                                                                                                                                                                                                            | Unit | Unit Cost (\$) |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.183 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Balau timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 2,000sq mm and not exceeding 4,000sq mm cross-sectional area)   | m    | 12.16          |
| CP.184 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Ramin timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 4,000sq mm and not exceeding 6,000sq mm cross-sectional area)   | m    | 21.08          |
| CP.185 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Kapur timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 4,000sq mm and not exceeding 6,000sq mm cross-sectional area)   | m    | 18.53          |
| CP.186 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Chengal timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 4,000sq mm and not exceeding 6,000sq mm cross-sectional area) | m    | 22.78          |
| CP.187 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Balau timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 4,000sq mm and not exceeding 6,000sq mm cross-sectional area)   | m    | 22.44          |
| CP.188 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Ramin timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 6,000sq mm cross-sectional area)                                | m    | 22.95          |
| CP.189 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Kapur timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 6,000sq mm cross-sectional area)                                | m    | 29.24          |
| CP.190 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Chengal timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 6,000sq mm cross-sectional area)                              | m    | 31.79          |
| CP.191 | Frame, head, mullion, transome, studs, cill fitments, joinery, etc in wrot Balau timber worked to the required shape including forming grooves, rebated, throats, weathered edges etc (Frame exceeding 6,000sq mm cross-sectional area)                                | m    | 30.86          |
| CP.192 | Add to any of above items (CP145 to CP160) if pressure impregnated.                                                                                                                                                                                                    | m    | 0.68           |
| CP.193 | Cut out lengths of framing not exceeding 2,000sq mm cross-sectional area to existing door, window, partition, studding, staircase, joinery, fitment etc remove off site, and where necessary prepare cut surface to receive new                                        | m    | 2.81           |
| CP.194 | Cut out lengths of framing exceeding 2,000sq mm and not exceeding 4,000sq mm cross-sectional area to existing door, window, partition, studding, staircase,                                                                                                            | m    |                |
| CP.195 | joinery, fitment etc remove off site, and where necessary prepare cut surface to receive new Cut out lengths of framing exceeding 4,000sq mm cross-sectional area to                                                                                                   | m    | 3.74           |
|        | existing door, window, partition, studding, staircase, joinery, fitment etc remove off site, and where necessary prepare cut surface to receive new (Appendix 19).                                                                                                     |      | 4.25           |
| CP.196 | Labour cutting existing frame to form grooves, rebates, throats, etc not exceeding 1,500sq mm in sectional area.                                                                                                                                                       | m    | 3.4            |

| S/No   | Description                                                                                                                                                                                                     | Unit | Unit Cost (\$) |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.197 | Take out existing frame for door, window, etc provide temporary support if necessary, remove off site and make good reveal.                                                                                     | m    | 35.53          |
| CP.198 | Take out existing frame for door, window, etc cramp up re-wedge joint and refix, provide temporary support if necessary, remove off site and make good reveal.                                                  | no   | 43.01          |
| CP.199 | Beads, picture rails, skirtings, architraves, fillets, etc in wrot Remin timber not exceeding 500sq mm in sectional area (irrespective of profile).                                                             | m    | 8.08           |
| CP.200 | Add CP168 for each additional increase of 500sq mm sectional area                                                                                                                                               | m    | 0.94           |
| CP.201 | Beads, picture rails, skirtings, architraves, fillets, etc in wrot Chengal timber not exceeding 500sq mm in sectional area (irrespective of profile).                                                           | m    | 8.42           |
| CP.202 | Add CP170 for each additional increase of 500sq mm sectional area                                                                                                                                               | m    | 0.94           |
| CP.203 | Beads, picture rails, skirtings, architraves, fillets, etc in wrot Kapur timber not exceeding 500sq mm in sectional area (irrespective of profile).                                                             | m    | 7.82           |
| CP.204 | Add CP172 for each additional increase of 500sq mm sectional area                                                                                                                                               | m    | 0.77           |
| CP.205 | Add to any of the above items (CP168 to CP173) if pressure impregnated.                                                                                                                                         | m    | 0.68           |
| CP.206 | Cut out lengths of existing beads, picture rails skirtings, architraves, fillets, etc (any size) remove off site and where necessary prepare cut surface to receive new.                                        | m    | 1.7            |
| CP.207 | Supply and install standard partition comprising sawn Kapur framing not exceeding 4,000sq mm in sectional area fixed at 600mm centre both ways (lining measured separately).                                    | sq m | 14.96          |
| CP.208 | Supply and install standard partition comprising sawn Kapur framing exceeding 4,000sq mm and not exceeding 6,500sq mm in sectional area fixed at 600mm centre both ways (lining measured separately).           | sq m | 16.83          |
| CP.209 | Supply and install standard partition comprising Chengal sawn framing not exceeding 4,000sq mm in sectional area fixed at 600mm centre both ways (lining measured separately)                                   | sq m | 18.87          |
| CP.210 | Supply and install standard partition comprising Chengal sawn framing exceeding 4,000sq mm and not exceeding 6,500sq mm in sectional area fixed at 600mm centre both ways (lining measured separately)          | sq m | 25.16          |
| CP.211 | Take down existing timber partition and remove off site.                                                                                                                                                        | sq m | 7.23           |
| CP.212 | Take down existing timber partition but rebuild in large section using the same material and cart away remaining off site.                                                                                      | sq m | 16.49          |
| CP.213 | Labour and material for cutting opening in partition to receive ducts, telephone tray, etc (any size) and including additional bearers (new opening frame and telephone tray/ducting measured separately).      | no   | 54.49          |
| CP.214 | Making opening in existing timber partition and fix frame (any size) for airconditioner including making good surrounds and cart away debris off site (rate inclusive of new opening frame).                    | no   | 58.65          |
| CP.215 | Supply and install approved toilet compartment consisting of 10mm thick solid compact laminate finished with melamine on both sides c/w stainless steel leg supports etc. (colour of lamination to be approved) | sq m | 220.92         |
| CP.216 | Supply and install approved toilet compartment consisting of 13mm thick solid compact laminate finished with melamine on both sides c/w stainless steel leg supports etc. (colour of lamination to be approved) | sq m | 261.8          |

| S/No   | Description                                                                                                                                                                                                                                    | Unit | Unit Cost (\$) |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.217 | Supply and install door consisting of 10mm thick solid compact laminate finished with melamine on both sides and c/w stainless steel leg supports, heavy duty gravity hinges, indicator bolt, aluminium trimmings, etc.                        | sq m | 237.58         |
| CP.218 | Supply and install door consisting of 13mm thick solid compact laminate finished with melamine on both sides and c/w stainless steel leg supports, heavy duty gravity hinges, indicator bolt, aluminium trimmings, etc.                        | sq m | 277.7          |
| CP.219 | Dismantle toilet partitions and remove off site including make good affected areas.                                                                                                                                                            | no   | 8.42           |
| CP.220 | Supply and fix 20mm thick fibreglass door or hardboard door to WC compartment including 1.5 pairs of 100 x 75mm stainless steel butt hinges.                                                                                                   | sq m | 130.9          |
| CP.221 | Supply and fix in replacement Moflex toilet partitions 10mm thick, model Ardmoe including all necessary accessories and of approved colour.                                                                                                    | sq m | 168.3          |
| CP.222 | Supply and fix in replacement Moflex toilet cubicle door 10mm thick of approved colour complete with hinges                                                                                                                                    | sq m | 187            |
| CP.223 | Supply and fix 1200 x 200 x 3mm thick black common rubber sheet to edge of toilet partition including 25 x 6mm thick aluminium strip and 6mm diameter x 13mm long bolts and nuts.                                                              | no   | 19.64          |
| CP.224 | Take out existing Chengal treads and risers, remove off site and replace with new to match existing including wedging, screwing, blocking and bracketting as necessary.                                                                        | sq m | 85.09          |
| CP.225 | Take out existing Kapur treads and risers, remove off site and replace with new to match existing including wedging, screwing, blocking and bracketting as necessary.                                                                          | sq m | 53.98          |
| CP.226 | Take out existing Balau treads and risers, remove off site and replace with new to match existing including wedging, screwing, blocking and bracketting as necessary.                                                                          | sq m | 58.48          |
| CP.227 | Cut out length of existing string to Chengal staircase, remove off site and replace with new to match including all necessary splicing joints, forming housing for treads and risers, refixing balusters and under-pinning                     | cu m | 1708.25        |
| CP.228 | Cut out length of existing string to Kapur staircase, remove off site and replace with new to match including all necessary splicing joints, forming housing for treads and risers, refixing balusters and under-pinning                       | cu m | 1104.49        |
| CP.229 | Cut out length of existing string to Balau staircase, remove off site and replace with new to match including all necessary splicing joints, forming housing for treads and risers, refixing balusters and under-pinning                       | cu m | 1364.68        |
| CP.230 | Cut out length of Chengal wall hand-rail or handrail to balustrade including frames, bends, etc remove off site and replace with new to match including all necessary splicing joints to existing brackets and joints to dowels and balusters. | cu m | 2063.63        |
| CP.231 | Cut out length of Balau wall hand-rail or handrail to balustrade including frames, bends, etc remove off site and replace with new to match including all necessary splicing joints to existing brackets and joints to                         | cu m | 1438.29        |
| CP.232 | dowels and balusters.  Take out existing chengal baluster, remove off site and replace with new to match including housing at both ends.                                                                                                       | no   | 22.44          |
| CP.233 | Take out existing Kapur baluster, remove off site and replace with new to match including housing at both ends.                                                                                                                                | no   | 18.53          |
| CP.234 | Take out existing balau baluster, remove off site and replace with new to match including housing at both ends.                                                                                                                                | no   | 22.78          |
| CP.235 | Cut out short length of existing chengal newel (not exceeding 10,000sq mm cross-sectional area), remove off site and replace with new to match                                                                                                 | m    | 31.79          |

| S/No   | Description                                                                                                                                                                                                                  | Unit | Unit Cost (\$) |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
|        | including temporary support if necessary and housing for handrails, string etc.                                                                                                                                              |      |                |
| CP.236 | Cut out short length of existing Kapur newel (not exceeding 10,000sq mm cross-sectional area), remove off site and replace with new to match including temporary support if necessary and housing for handrails, string etc. | m    | 30.86          |
| CP.237 | Cut out short length of existing Balau newel (not exceeding 10,000sq mm cross-sectional area), remove off site and replace with new to match including temporary support if necessary and housing for handrails, string      | m    | 32.3           |
| CP.238 | etc.  Take down existing balustrade and rebuild using the same material including new wedges for joints, glueing, cramping etc.                                                                                              | no   | 41.23          |
| CP.239 | Secure existing handrail to existing wall bracket or to existing newel or other support.                                                                                                                                     | no   | 8.25           |
| CP.240 | Secure one end of loose baluster.                                                                                                                                                                                            | no   | 1.96           |
| CP.241 | 6mm thick calcium silicate board reinforced with cellulose for internal use only and including fixing to bearers. (Bearers measured separately).                                                                             | sq m | 16.15          |
| CP.242 | 9mm thick calcium silicate board reinforced with cellulose for internal use only and including fixing to bearers. (Bearers measured separately).                                                                             | sq m | 19.81          |
| CP.243 | 12mm thick calcium silicate board reinforced with cellulose for internal use only and including fixing to bearers. (Bearers measured separately).                                                                            | sq m | 24.82          |
| CP.244 | 15mm thick calcium silicate board reinforced with cellulose for internal use only and including fixing to bearers. (Bearers measured separately).                                                                            | sq m | 45.65          |
| CP.245 | 4.5mm thick calcium silicate board reinforced with selected fibres and fillers for internal and external use and including fixing to bearers (bearers measured separately).                                                  | sq m | 25.5           |
| CP.246 | 6mm thick calcium silicate board reinforced with selected fibres and fillers for internal and external use and including fixing to bearers (bearers measured separately).                                                    | sq m | 33.07          |
| CP.247 | 9mm thick calcium silicate board reinforced with selected fibres and fillers for internal and external use and including fixing to bearers (bearers measured separately).                                                    | sq m | 50.83          |
| CP.248 | 12mm thick calcium silicate board reinforced with selected fibres and fillers for internal and external use and including fixing to bearers (bearers measured separately).                                                   | sq m | 91.97          |
| CP.249 | 6mm thick top gradefibre resistance calcium silicate board reinforced with selected fibres and fillers for internal use and including fixing to bearers (bearers measured separately).                                       | sq m | 22.44          |
| CP.250 | 9mm thick top gradefibre resistance calcium silicate board reinforced with selected fibres and fillers for internal use and including fixing to bearers (bearers measured separately).                                       | sq m | 28.05          |
| CP.251 | 12mm thick top gradefibre resistance calcium silicate board reinforced with selected fibres and fillers for internal use and including fixing to bearers (bearers measured separately).                                      | sq m | 31.96          |
| CP.252 | 4.5mm thick fibre-reinforced cement building board fixed to bearers (bearers measured separately).                                                                                                                           | sq m | 14.96          |
| CP.253 | 6mm thick fibre-reinforced cement building board fixed to bearers (bearers measured separately).                                                                                                                             | sq m | 16.24          |
| CP.254 | 9mm thick fibre-reinforced cement building board fixed to bearers (bearers measured separately).                                                                                                                             | sq m | 27.8           |

| S/No   | Description                                                                                                                                                                                               | Unit | Unit Cost (\$) |

| CP.280 | 4mm thick ordinary plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screws (bearers measured separately).                       | sq m | 5.36           |
| CP.281 | 6mm thick ordinary plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screws (bearers measured separately).                       | sq m | 6.8            |
| CP.282 | 9mm thick ordinary plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screws (bearers measured separately).                       | sq m | 9.44           |
| CP.283 | 12mm thick ordinary plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screws (bearers measured separately).                      | sq m | 10.97          |
| CP.284 | 15mm thick ordinary plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screws (bearers measured separately).                      | sq m | 13.94          |
| CP.285 | 18mm thick ordinary plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screws (bearers measured separately).                      | sq m | 15.05          |
| CP.286 | 25mm thick ordinary plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screws (bearers measured separately).                      | sq m | 19.64          |
| CP.287 | 4mm thick plywood with Teak, or other veneer on one face pinned or screwed with brass screws to bearers or glued with an approved adhesive compound as panelling (bearers measured separately). | sq m | 13.26          |
| CP.288 | 5mm thick plywood with Teak, or other veneer on one face pinned or screwed with brass screws to bearers or glued with an approved adhesive compound as panelling (bearers measured separately). | sq m | 13.94          |
| CP.289 | 6mm thick plywood with Teak, or other veneer on one face pinned or screwed with brass screws to bearers or glued with an approved adhesive compound as panelling (bearers measured separately). | sq m | 14.62          |
| CP.290 | 4mm thick approved waterproof plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screw (Bearers measured separately).             | sq m | 8.67           |
| CP.291 | 6mm thick approved waterproof plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screw (Bearers measured separately).             | sq m | 10.03          |
| CP.292 | 9mm thick approved waterproof plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screw (Bearers measured separately).             | sq m | 11.99          |
| CP.293 | 12mm thick approved waterproof plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screw (Bearers measured separately).            | sq m | 13.13          |
| CP.294 | 15mm thick approved waterproof plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screw (Bearers measured separately).            | sq m | 14.62          |
| CP.295 | 18mm thick approved waterproof plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screw (Bearers measured separately).            | sq m | 15.73          |

| S/No   | Description                                                                                                                                                                              | Unit | Unit Cost (\$) |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.296 | 25mm thick approved waterproof plywood fixed and glued with an approved adhesive compound as panelling or pinned or fixed to bearers with brass screw (Bearers measured separately).     | sq m | 19.81          |
| CP.297 | 3mm thick approved marine plywood fixed and glued with an approved compound as panelling or pinned or fixed to bearers with brass screws (Bearers measured separately).                  | sq m | 12.92          |
| CP.298 | 6mm thick approved marine plywood fixed and glued with an approved compound as panelling or pinned or fixed to bearers with brass screws (Bearers measured separately).                  | sq m | 18.28          |
| CP.299 | 12mm thick approved marine plywood fixed and glued with an approved compound as panelling or pinned or fixed to bearers with brass screws (Bearers measured separately).                 | sq m | 29.75          |
| CP.300 | 15mm thick approved marine plywood fixed and glued with an approved compound as panelling or pinned or fixed to bearers with brass screws (Bearers measured separately).                 | sq m | 34.85          |
| CP.301 | 18mm thick approved marine plywood fixed and glued with an approved compound as panelling or pinned or fixed to bearers with brass screws (Bearers measured separately).                 | sq m | 42.08          |
| CP.302 | 25mm thick approved marine plywood fixed and glued with an approved compound as panelling or pinned or fixed to bearers with brass screws (Bearers measured separately).                 | sq m | 56.1           |
| CP.303 | Decorative vinyl or veneer (any thickness) to gypsum board, plywood, etc.                                                                                                                | sq m | 6.46           |
| CP.304 | 0.8mm thick laminated plastic lining fixed to timber surfaces with approved adhesive compound including preparing surface.                                                               | sq m | 16.49          |
| CP.305 | 1mm thick laminated plastic lining fixed to timber surfaces with approved adhesive compound including preparing surface.                                                                 | sq m | 18.87          |
| CP.306 | 1.3 mm thick laminated plastic lining fixed to timber surfaces with approved adhesive compound including preparing surface.                                                              | sq m | 21.34          |
| CP.307 | 1mm thick decorative steel plate formica fixed to timber surfaces with approved adhesive compound including preparing surface                                                            | sq m | 86.36          |
| CP.308 | Strip existing laminated plastic veneer lining, remove off site and prepare surfaces to receive new.                                                                                     | sq m | 3.32           |
| CP.309 | 10mm thick (at mid-point) Ramin panel comprising of 75mm wide or 100mm wide Ramin strips shaoed to required sizes and design, fixed to timber bearers (Bearers measured separately).     | sq m | 88.4           |
| CP.310 | Take out existing lining (any type and thickness) from partition, counter tops, fitments, wall panels and the like, remove old boards off site and prepare surrounds to receive new.     | sq m | 2.21           |
| CP.311 | Take out existing lining (any type and thickness) from partition, counter tops, fitments, wall panels and the like, set aside old boards for reuse and prepare surrounds to receive new. | sq m | 1.87           |
| CP.312 | Take from stack and refix old lining (not exceeding 6mm thick) including new fasteners.                                                                                                  | sq m | 3.49           |
| CP.313 | Take from stack and refix old lining (exceeding 6mm thick and not exceeding 15mm thick) including new fasteners.                                                                         | sq m | 4.34           |
| CP.314 | Take from stack and refix old lining (exceeding 15mm thick) including new                                                                                                                | sq m | 5.19           |
| CP.315 | fasteners.  Refix only existing plastic lamination after all necessary surface                                                                                                           | sq m | 4.68           |
| CP.316 | preparations using approved adhesive (Min. 0.5sq m) Supply and install 50mm thick light weight partitions all in accordance with the manufacturer's instructions.                        | sq m | 58.91          |

| S/No   | Description                                                                                                                                                                                                                | Unit | Unit Cost (\$) |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.317 | Supply and install cushion lining to peddle cell walls and floor consisting of 6mm thk plywood backing, 50mm foam rubber infill, 1 layer of PVC sheet and 1 layer of canvas dressing, each panel not exceeding 600mm width | sq m | 64.77          |
| CP.318 | including lining around squatting pan, observation opening.  Supply and fix nylon fly-proof netting (14 mesh x 31 gauge) to window, door, panels, etc.                                                                     | sq m | 4              |
| CP.319 | Supply & Install fly-proof netting 640mm x 410mm magnetic screen for Hostel door louvres.                                                                                                                                  | no   | 93.5           |
| CP.320 | Take out and cart away nylon fly-proof netting (14 mesh x 31 gauge) and prepare surrounds to receive new.                                                                                                                  | sq m | 0.68           |
| CP.321 | Take out existing chicken wire netting in fence including any framing or posts (any type) with foundations, remove off site and including making good work disturbed.                                                      | sq m | 1.28           |
| CP.322 | Take out existing chicken wire netting, cart away from site or lay aside for re-use.                                                                                                                                       | sq m | 1.02           |
| CP.323 | Take from stack and fix only chicken wire netting.                                                                                                                                                                         | sq m | 2.38           |
| CP.324 | 24 gauge galvanised iron hex chicken wire netting (13 mm each) (fillets measured separately)                                                                                                                               | sq m | 4.85           |
| CP.325 | Supply only 13mm x 13mm x 1.2mm thick stainless steel chicken wire mesh.                                                                                                                                                   | sq m | 29.5           |
| CP.326 | Install only stainless steel chicken wire mesh.                                                                                                                                                                            | sq m | 4.68           |
| CP.327 | Expanded steel ornamesh 16mm x 38mm x 1mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)                                                              | sq m | 4.93           |
| CP.328 | Expanded steel ornamesh 22mm x 57mm x 2mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)                                                              | sq m | 12.5           |
| CP.329 | Expanded steel ornamesh 35mm x 76mm x 2mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)                                                              | sq m | 8.67           |
| CP.330 | Expanded steel ornamesh 35mm x 76mm x 3mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)                                                              | sq m | 20.74          |
| CP.331 | Expanded steel balustrade mesh 25mm x 4mm x 3mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)                                                        | sq m | 17.77          |
| CP.332 | Expanded steel balustrade mesh 33mm x 102mm x 3mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)                                                      | sq m | 11.73          |
| CP.333 | Expanded steel Gridmesh 43mm x 135mm x 5mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)                                                             | sq m | 42.25          |
| CP.334 | Expanded steel Gridmesh 30mm x 75mm x 3mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)                                                              | sq m | 37.57          |
| CP.335 | Expanded steel gridmesh 30mm x 75mm x 5mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)                                                              | sq m | 74.21          |

| S/No   | Description                                                                                                                                              | Unit | Unit Cost (\$) |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.336 | Square weldmesh 50mm x 50mm x 3.25mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately) | sq m | 4.85           |
| CP.337 | Square weldmesh 50mm x 50mm x 4.10mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately) | sq m | 6.89           |
| CP.338 | Finemesh 12.5mm x 12.5mm x 1.5mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)     | sq m | 5.7            |
| CP.339 | Finemesh 12.5mm x 12.5mm x 1.2mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)     | sq m | 4.68           |
| CP.340 | Finemesh 12.5mm x 25mm x 1.5mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)       | sq m | 4.51           |
| CP.341 | Finemesh 12.5mm x 25mm x 1.2mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)       | sq m | 3.32           |
| CP.342 | Finemesh 25mm x 25mm x 1.5mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)         | sq m | 3.32           |
| CP.343 | Finemesh 25mm x 25mm x 1.2mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)         | sq m | 2.38           |
| CP.344 | Finemesh 50mm x 50mm x 1.5mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)         | sq m | 1.79           |
| CP.345 | Finemesh 50mm x 50mm x 2.0mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)         | sq m | 4              |
| CP.346 | Finemesh 50mm x 50mm x 2.0mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)         | sq m | 2.98           |
| CP.347 | Roof mesh 75mm x 75mm x 1.5mm thick in vents grille work, undersides of eaves etc (fixed to timber or metal frames) (fillets measured separately)        | sq m | 1.28           |
| CP.348 | Extra over above items (CP293 to CP312) for tack welding to metal frames (area of mesh measured) (welding equipment measured separately).                | sq m | 2.81           |
| CP.349 | Take out existing weldmesh and the like including or excluding beadings, carting away from site and making good surrounding.                             | sq m | 1.7            |
| CP.350 | Tinned wire gauge cut to required sizes and fixed complete including metal or wooden beads and 2 coats paint to bead.                                    | sq m | 8.59           |
| CP.351 | Aluminium, brass or copper woven wire cut to required sizes and fixed complete including metal or wooden beads and 2 coats paint to bead.                | sq m | 15.3           |
| CP.352 | Perforated zinc cut to required sizes and fixed complete including metal or wooden beads and 2 coats paint to bead.                                      | sq m | 4.76           |
| CP.353 | Take out existing including beading and cart away.                                                                                                       | sq m | 0.51           |
| CP.354 | Supply and install 50mm thick fibreglass of density 13 - 16kg/cu m insulation.                                                                           | sq m | 6.55           |
| CP.355 | Supply and install 50mm thick fibreglass of density 32kg/cu m insulation.                                                                                | sq m | 8.16           |
| CP.356 | Supply and install 50mm thick fibreglass of density 48kg/cu m insulation.                                                                                | sq m | 14.54          |
| CP.357 | Supply and install 25mm thick mineral wood of density 100 kg/cu m insulation.                                                                            | sq m | 8.59           |
| CP.358 | Supply and install 50mm thick mineral wood of density 50kg/cu m insulation.                                                                              | sq m | 10.63          |

| S/No   | Description                                                                                                                                                                                                                                                                                          | Unit | Unit Cost (\$) |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| CP.359 | Supply and install 50mm thick mineral wood of density 60kg/cu m insulation.                                                                                                                                                                                                                          | sq m | 11.05          |
| CP.360 | Supply and install 50mm thick mineral wood of density 80kg/cu m insulation.                                                                                                                                                                                                                          | sq m | 14.28          |
| CP.361 | Supply and install 50 mm thick mineral wood density 100kg/cu m insulation.                                                                                                                                                                                                                           | sq m | 16.15          |
| CP.362 | Add to above items (CP319 to CP326) laminated with aluminium foil.                                                                                                                                                                                                                                   | sq m | 5.44           |
| CP.363 | Supply and install 25mm thick woodwool slab pinned or screwed to bearers (bearers measured separately).                                                                                                                                                                                              | sq m | 16.92          |
| CP.364 | Supply and install 50mm thick woodwool slab pinned or screwed to bearers (bearers measured separately).                                                                                                                                                                                              | sq m | 20.15          |
| CP.365 | Supply and install 75mm thick woodwool slab pinned or screwed to bearers (bearers measured separately).                                                                                                                                                                                              | sq m | 28.14          |
| CP.366 | One layer of 'Sisalation 450' or other equal and approved double sided, double reinforced fire resistant aluminium foil, lapped 150mm at joint, including extra labour dressing insulation sheet over roof purlins, bearers of ceilings, partitions etc (measured nett, no allowance made for laps). | sq m | 4.25           |
| CP.367 | One layer of 'Sisalation 431' or other equal and approved double sided, double reinforced fire resistant aluminium foil, lapped 150mm at joint, including extra labour dressing insulation sheet over roof purlins, bearers of ceilings, partitions etc (measured nett, no allowance made for laps). | sq m | 3.4            |
| CP.368 | One layer of 'Sisalation 525' or other equal and approved double sided, double reinforced fire resistant aluminium foil, lapped 150mm at joint, including extra labour dressing insulation sheet over roof purlins, bearers of ceilings, partitions etc (measured nett, no allowance made for laps). | sq m | 3.66           |
| CP.369 | One layer of 'Sisalation 901' single sided, double reinforced fire resistant aluminium foil, lapped 150mm at joint, including extra labour dressing insulation sheet over roof purlins, bearers of ceilings, partitions etc (measured nett, no allowance made for laps).                             | sq m | 1.96           |
| CP.370 | One layer of 'Thermofoil 750' or other equal and approved double sided, reinforced aluminium foil, lapped 150mm at joints, including extra labour dressing over roof purlins, bearers of ceilings, partitions etc (measured nett, no allowance made for laps).                                       | sq m | 3.66           |
| CP.371 | One layer of 'Thermofoil 731' or other equal and approved double sided, reinforced aluminium foil, lapped 150mm at joints, including extra labour dressing over roof purlins, bearers of ceilings, partitions etc (measured nett, no allowance made for laps).                                       | sq m | 3.06           |
| CP.372 | One layer of 'Thermofoil 600' single-sided, reinforced aluminium foil, lapped 150mm at joints, including extra labour dressing over roof purlins, bearers of ceilings, partitions etc (measured nett, no allowance made for                                                                          | sq m | 2.38           |
| CP.373 | laps). Supply new or in replacement approved type Kapur pelmet, 150mm wide x 150mm deep to curtain rail, sliding partitions, etc                                                                                                                                                                     | m    | 6.89           |
| CP.374 | Supply new or in replacement approved type Kapur pelmet with Teak ply, 150mm wide x 150mm deep to curtain rail, sliding partitions, etc                                                                                                                                                              | m    | 8.59           |
| CP.375 | White plastic curtain rail for light weight fabric curtain c/w brackets, stop and gliders.                                                                                                                                                                                                           | m    | 11.56          |
| CP.376 | White plastic curtain rail for heavy fabric curtain c/w brackets, stop and gliders.                                                                                                                                                                                                                  | m    | 17             |
| CP.377 | White plastic curtain rail for heavy fabric curtain c/w brackets, stop and gliders but double tracks.                                                                                                                                                                                                | m    | 32.73          |

**BW-138** 

# 6. STEELWORK

| S/No  | Description                                                                                                                                                                                                                                                                                                                                                                        | Unit | Unit Cost (\$) |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| SW.1  | Mild steel rod, plate, angle, channel, flats, etc. cut in lengths including all labour, bending, welding, drilling and painting one coat of inhibitive primer before delivery.                                                                                                                                                                                                     | kg   | 2.98           |
| SW.2  | Wrought iron rod, plate, angle, channel, flats, etc cut in lengths including all labour, bending, welding, drilling and painting one coat of inhibitive primer before delivery.                                                                                                                                                                                                    | kg   | 2.55           |
| SW.3  | Roll steel of any section or size including cutting, welding, and painting one coat of inhibitive primer before delivery, in stanchions, beams, girders, roof trusses, purlins, cleats, brackets, etc.                                                                                                                                                                             | kg   | 2.81           |
| SW.4  | Mild steel tubular or rectangular or square hollow section of any section or size including cutting, welding, and painting one coat of inhibitive primer before delivery, in stanchions, beams, girders, roof trusses, purlins, cleats, brackets, etc.                                                                                                                             | kg   | 2.98           |
| SW.5  | Light gauge steel channel section etc in purlins, rafters, cleats, brackets, etc.                                                                                                                                                                                                                                                                                                  | kg   | 2.98           |
| SW.6  | Mild steel bright tubular, square or rectangular hollow section of any section or size including cutting, welding, and painting one coat of inhibitive primer before delivery in framing to joinery, fitments and fittings.                                                                                                                                                        | kg   | 2.98           |
| SW.7  | Weld joints, any thickness of steel or weld (length of girth of joint measured) (welding machine measured separately).                                                                                                                                                                                                                                                             | m    | 1.79           |
| SW.8  | Spot weld ie. ends of wire to frames (welding machine measured separately).                                                                                                                                                                                                                                                                                                        | no   | 0.26           |
| SW.9  | Grouting up gap not exceeding 300mm wide x 50mm thick between RSJ and brickwall with dry-pack-cement mortar (1:1) to the satisfaction of SO and clean surrounds.                                                                                                                                                                                                                   | m    | 4.51           |
| SW.10 | Grouting up gap exceeding 300mm wide x 50mm thick between RSJ and brickwall with dry-pack-cement mortar (1:1) to the satisfaction of SO and clean surrounds.                                                                                                                                                                                                                       | m    | 9.61           |
| SW.11 | 25mm thick dry-pack-cement mortar grouting (1:1) under steel stanchion base plate.                                                                                                                                                                                                                                                                                                 | sq m | 35.19          |
| SW.12 | Cut off existing projecting metal hollow section, T-bearers, I-beam, etc not exceeding 100mm girth (Rate measured per spot) (cutting machine measured separately).                                                                                                                                                                                                                 | no   | 6.38           |
| SW.13 | Add for each 25mm increase in girth.                                                                                                                                                                                                                                                                                                                                               | no   | 0.51           |
| SW.14 | Cut off existing projecting reinforcing bar (any size) and remove debris off site (hacking up concrete and cutting machine measured separately).                                                                                                                                                                                                                                   | no   | 1.53           |
| SW.15 | Build end of steel joists, bearers, etc into concrete work, brickwork, etc and make good surround with and including materials to match (making holes measured separately).                                                                                                                                                                                                        | no   | 7.65           |
| SW.16 | Hot-dipped galvanising to steel members.                                                                                                                                                                                                                                                                                                                                           | kg   | 1.02           |
| SW.17 | Hot-dipped galvanising to mild steel grating (Type A)                                                                                                                                                                                                                                                                                                                              | m    | 7.4            |
| SW.18 | 0.7mm aluminium sheet for fabricating valley gutters, box gutters, eaves gutters, flashing, fitments, etc (brackets for gutter measured separately) including joints welded seams, beaded edges, galvanisied nails, dressing and bending, cutting, chase in wall, sealing compound and cement mortar, forming outlets, stop ends, etc (measured nett, no allowance made for laps). | sq m | 41.23          |

| S/No   | Description                                                                                                                                          | Unit | Unit Cost (\$) |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| SW.19  | 1.00mm aluminium sheet for fabricating valley gutters, box gutters, eaves                                                                            | sq m |                |
|        | gutters, flashing, fitments, etc (brackets for gutter measured separately)                                                                           |      | F2 47          |
|        | including joints welded seams, beaded edges, galvanisied nails, dressing and bending, cutting, chase in wall, sealing compound and cement            |      | 53.47          |
|        | mortar, forming outlets, stop ends, etc (measured nett, no allowance                                                                                 |      |                |
|        | made for laps).                                                                                                                                      |      |                |
| SW.20  | 1.32mm aluminium sheet for fabricating valley gutters, box gutters, eaves                                                                            | sq m |                |
|        | gutters, flashing, fitments, etc (brackets for gutter measured separately)                                                                           |      |                |
|        | including joints welded seams, beaded edges, galvanisied nails, dressing                                                                             |      | 60.95          |
|        | and bending, cutting, chase in wall, sealing compound and cement mortar, forming outlets, stop ends, etc (measured nett, no allowance                |      |                |
|        | made for laps).                                                                                                                                      |      |                |
| SW.21  | 2.00mm aluminium sheet for fabricating valley gutters, box gutters, eaves                                                                            | sq m |                |
|        | gutters, flashing, fitments, etc (brackets for gutter measured separately)                                                                           |      |                |
|        | including joints welded seams, beaded edges, galvanisied nails, dressing                                                                             |      | 92.06          |
|        | and bending, cutting, chase in wall, sealing compound and cement                                                                                     |      |                |
|        | mortar, forming outlets, stop ends, etc (measured nett, no allowance made for laps).                                                                 |      |                |
| SW.22  | 0.794mm stainless steel sheet for fabricating valley gutters, box gutters,                                                                           | sq m |                |
|        | caves gutter, flashing, fitments, etc to any size and shape, (Brackets for                                                                           | 1    | 121.13         |
|        | gutters measured separately).                                                                                                                        |      |                |
| SW.23  | 1.00mm stainless steel sheet for fabricating valley gutters, box gutters,                                                                            | sq m | 138.98         |

| SW.79 | Y' anti-climb arm of 75 x 75x 6mm thick x 300mm long mild steel angle each arm with 3 strands PVC coated galvanised barbed wire (14 SWG) or 2.03mm welded onto top of new existing fence posts or on existing/new wall spaced not more than 3.00m apart and including painting one coat of inhibitive primer and 2 coats aluminium or synthetic enamel paint, making holes in wall to receive end of arm and grouting with cement mortar (Length measured on plan).                                                                          | m    | 6.12           |
| SW.80 | Y' anti-climb arm of 75 x 75x 6mm thick x 300mm long mild steel angle each arm with 4 strands barbed wire or 2.03mm welded onto top of new existing fence posts or on existing/new wall spaced not more than 3.00m apart and including painting one coat of inhibitive primer and 2 coats aluminium or synthetic enamel paint, making holes in wall to receive end of arm and grouting with cement mortar (Length measured on plan).                                                                                                         | m    | 7.14           |
| SW.81 | Y' anti-climb arm of 75 x 75x 6mm thick x 300mm long mild steel angle each arm with 3 strands PVC coated galvanised barbed wire (14 SWG) or 2.03mm fixed horizontally and 2 strands fixed diagonally welded onto top of new or existing fence posts or on existing/new wall, spaced not more than 3.00m apart and including painting one coat of inhibitive primer and 2 coats aluminium or synthetic enamel paint, making holes in wall to receive end of arm and grouting with cement mortar (Length measured on plan).                    | m    | 8.16           |
| SW.82 | Y' anti-climb arm of 75 x 75x 6mm thick x 300mm long mild steel angle each arm with 4 strands barbed wire fixed horizontally and 2 strands fixed diagonally or 2.03mm fixed horizontally and 2 strands fixed diagonally welded onto top of new or existing fence posts or on existing/new wall, spaced not more than 3.00m apart and including painting one coat of inhibitive primer and 2 coats aluminium or synthetic enamel paint, making holes in wall to receive end of arm and grouting with cement mortar (Length measured on plan). | m    | 8.93           |
| SW.83 | Remove existing fence (any type) c/w posts, struts, foundations, anticlimb arm, creepers, etc. as directed and remove off site including making good work disturbed. (Length of fence measured but height measured from top of foundation to apex of post or anti-climb arm if applicable).                                                                                                                                                                                                                                                  | sq m | 4.08           |
| SW.84 | Take out existing chain link mesh only (any type) and remove off site (Nett area of mesh measured).                                                                                                                                                                                                                                                                                                                                                                                                                                          | sq m | 1.45           |
| SW.85 | Take out as necessary and tighten existing chain link mesh only or refix in new position including providing new straining wires, bolts, and staples to match existing. (Nett area of fence measured).                                                                                                                                                                                                                                                                                                                                       | sq m | 5.27           |

| S/No   | Description                                                                                                                                                                                                                                                                                                                                                  | Unit | Unit Cost (\$) |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| SW.86  | Take out existing chain link fence c/w posts, struts, concrete base, etc and lay aside for re-use including removing debris off site and making good work disturbed (Nett area of fence measured).                                                                                                                                                           | sq m | 4.59           |
| SW.87  | Take from stack and fix only existing chain link fence in new position c/w posts, struts, beading etc including providing new straining wires, bolts and staples to match existing (nett area measured separately).                                                                                                                                          | sq m | 5.02           |
| SW.88  | Cut remove grass, shrubs, creepers and hedges on one side of fence and clear away (Nett area measured).                                                                                                                                                                                                                                                      | sq m | 1.53           |
| SW.89  | Take out existing tubular or mild steel angle fence posts, struts, etc (any height) including foundation when directed, remove off site, make good work disturbed or prepare to receive new works.                                                                                                                                                           | no   | 4.85           |
| SW.90  | Replace existing tubular or mild steel angle fence struts or posts (any size) not exceeding 1m high from top of concrete base with new including taking out fence (any type), refixing, tightening, providing new bolts, staples, 3 coats paint, etc and removing existing concrete foundations when directed (New foundation measured separately).          | no   | 14.03          |
| SW.91  | Add for each additional stage of 100mm in height.                                                                                                                                                                                                                                                                                                            | no   | 1.53           |
| SW.92  | Cut and remove part of tubular or mild steel angle fence strut, post or anti-climb arm not exceeding 1m in length and replace with new to match including removing existing concrete foundations, taking out fence (any type), site welding, refixing, tightening, providing new bolts, staples, etc and 3 coats paint (New foundation measured separately). | no   | 14.03          |
| SW.93  | Add for each additional stage of 100mm in height.                                                                                                                                                                                                                                                                                                            | no   | 1.53           |
| SW.94  | Replace mild steel tubular angle posts (any size) in isolated position and not exceeding 1m high, welded on top of existing metal work or one end split, caulked and cast in concrete as described including drilling holes and 3 coats paint (New foundation and taking out existing foundation measured separately).                                       | no   | 10.63          |
| SW.95  | Add for each additional 100mm in height (New foundation and taking out existing foundation measured separately).                                                                                                                                                                                                                                             | no   | 1.28           |
| SW.96  | Labour only to refix existing tubular or angle fence post (any size and height) (Foundation measured separately).                                                                                                                                                                                                                                            | m    | 2.47           |
| SW.97  | 38mm diameter galvanised steel pipe tubing (medium duty) in fence posts & unclimbable arms, framed and welded together or framed with tees, bends, elbows etc including all drilling (nett length measured, concrete foundation and painting measured separately).                                                                                           | m    | 13.01          |
| SW.98  | 50mm diameter galvanised steel pipe tubing (medium duty) in fence posts & unclimbable arms, framed and welded together or framed with tees, bends, elbows etc including all drilling (nett length measured, concrete foundation and painting measured separately).                                                                                           | m    | 19.38          |
| SW.99  | 63mm diameter galvanised steel pipe tubing (medium duty) in fence posts & unclimbable arms, framed and welded together or framed with tees, bends, elbows etc including all drilling (nett length measured, concrete foundation and painting measured separately).                                                                                           | m    | 26.44          |
| SW.100 | 75mm diameter galvanised steel pipe tubing (medium duty) in fence posts & unclimbable arms, framed and welded together or framed with tees, bends, elbows etc including all drilling (nett length measured, concrete foundation and painting measured separately).                                                                                           | m    | 36.38          |

| S/No   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Unit | Unit Cost (\$) |
|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| SW.101 | 100mm diameter galvanised steel pipe tubing (medium duty) in fence posts & unclimbable arms, framed and welded together or framed with tees, bends, elbows etc including all drilling (nett length measured, concrete foundation and painting measured separately).                                                                                                                                                                                                               | m    | 47.35          |
| SW.102 | Take out strand of existing barbed wire or plain wire and remove off site.                                                                                                                                                                                                                                                                                                                                                                                                        | m    | 0.17           |
| SW.103 | Take out strand of existing barbed wire or plain wire and lay aside for reuse.                                                                                                                                                                                                                                                                                                                                                                                                    | m    | 0.17           |
| SW.104 | Take from stack and fix only strand of barbed wire or plain wire including providing new staples etc.                                                                                                                                                                                                                                                                                                                                                                             | m    | 0.34           |
| SW.105 | Take out as necessary and tighten strand of existing barbed wire or plain wire including providing new staples etc.                                                                                                                                                                                                                                                                                                                                                               | m    | 0.34           |
| SW.106 | Galvanised barbed wire 14 SWG (2.03mm) fixed with and including staples etc.                                                                                                                                                                                                                                                                                                                                                                                                      | m    | 0.43           |
| SW.107 | Galvanised barbed wire 12 SWG (2.64mm) fixed with and including staples etc.                                                                                                                                                                                                                                                                                                                                                                                                      | m    | 0.51           |
| SW.108 | Plain wire No 8 gauge (4.08mm) fixed with and including staples etc.                                                                                                                                                                                                                                                                                                                                                                                                              | m    | 0.68           |

| SW.440 | Hot dipped galvanised bolts of diameter 22mm with nuts and washers & shank length 50mm or other equal and approved type including drilling holes in metal or wood, if necessary. | no   | 5.27           |
| SW.441 | Hot dipped galvanised bolts of diameter 22mm with nuts and washers & shank length 58mm or other equal and approved type including drilling holes in metal or wood, if necessary. | no   | 5.27           |
| SW.442 | Hot dipped galvanised bolts of diameter 22mm with nuts and washers & shank length 63mm or other equal and approved type including drilling holes in metal or wood, if necessary. | no   | 5.36           |
| SW.443 | Hot dipped galvanised bolts of diameter 22mm with nuts and washers & shank length 75mm or other equal and approved type including drilling holes in metal or wood, if necessary. | no   | 5.87           |
| SW.444 | Hot dipped galvanised bolts of diameter 25mm with nuts and washers & shank length 75mm or other equal and approved type including drilling holes in metal or wood, if necessary. | no   | 7.4            |
| SW.445 | Supply and install stainless steel hex bolts of diameter 5mm, with nuts and washers & shank length 16mm including holes in metal or wood, if necessary.                          | no   | 0.51           |
| SW.446 | Supply and install stainless steel hex bolts of diameter 5mm, with nuts and washers & shank length 20mm including holes in metal or wood, if necessary.                          | no   | 0.51           |
| SW.447 | Supply and install stainless steel hex bolts of diameter 5mm, with nuts and washers & shank length 25mm including holes in metal or wood, if necessary.                          | no   | 0.51           |
| SW.448 | Supply and install stainless steel hex bolts of diameter 5mm, with nuts and washers & shank length 30mm including holes in metal or wood, if necessary.                          | no   | 0.51           |
| SW.449 | Supply and install stainless steel hex bolts of diameter 5mm, with nuts and washers & shank length 40mm including holes in metal or wood, if necessary.                          | no   | 0.6            |
| SW.450 | Supply and install stainless steel hex bolts of diameter 5mm, with nuts and washers & shank length 45mm including holes in metal or wood, if necessary.                          | no   | 0.6            |
| SW.451 | Supply and install stainless steel hex bolts of diameter 5mm, with nuts and washers & shank length 50mm including holes in metal or wood, if necessary.                          | no   | 0.68           |
| SW.452 | Supply and install stainless steel hex bolts of diameter 6mm, with nuts and washers & shank length 16mm including holes in metal or wood, if necessary.                          | no   | 0.51           |
| SW.453 | Supply and install stainless steel hex bolts of diameter 6mm, with nuts and washers & shank length 20mm including holes in metal or wood, if necessary.                          | no   | 0.51           |

| S/No   | Description                                                                                                                                                          | Unit | Unit Cost (\$) |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| SW.454 | Supply and install stainless steel hex bolts of diameter 6mm, with nuts and washers & shank length 25mm including holes in metal or wood, if necessary.              | no   | 0.6            |
| SW.455 | Supply and install stainless steel hex bolts of diameter 6mm, with nuts and washers & shank length 30mm including holes in metal or wood, if necessary.              | no   | 0.6            |
| SW.456 | Supply and install stainless steel hex bolts of diameter 6mm, with nuts and washers & shank length 40mm including holes in metal or wood, if necessary.              | no   | 0.6            |
| SW.457 | Supply and install stainless steel hex bolts of diameter 6mm, with nuts and washers & shank length 45mm including holes in metal or wood, if necessary.              | no   | 0.68           |
| SW.458 | Supply and install stainless steel hex bolts of diameter 6mm, with nuts and washers & shank length 50mm including holes in metal or wood, if necessary.              | no   | 0.68           |
| SW.459 | Supply and install stainless steel hex bolts of diameter 10mm, with nuts and washers & shank length 16mm including holes in metal or wood, if necessary.             | no   | 0.85           |
| SW.460 | Supply and install stainless steel hex bolts of diameter 10mm, with nuts and washers & shank length 20mm including holes in metal or wood, if                        | no   | 0.85           |
| SW.461 | necessary. Supply and install stainless steel hex bolts of diameter 10mm, with nuts and washers & shank length 25mm including holes in metal or wood, if             | no   | 0.85           |
| SW.462 | necessary.  Supply and install stainless steel hex bolts of diameter 10mm, with nuts and washers & shank length 30mm including holes in metal or wood, if            | no   | 0.94           |
| SW.463 | necessary. Supply and install stainless steel hex bolts of diameter 10mm, with nuts and washers & shank length 40mm including holes in metal or wood, if             | no   | 0.94           |
| SW.464 | necessary.  Supply and install stainless steel hex bolts of diameter 10mm, with nuts and washers & shank length 45mm including holes in metal or wood, if            | no   | 1.02           |
| SW.465 | necessary. Supply and install stainless steel hex bolts of diameter 10mm, with nuts and washers & shank length 50mm including holes in metal or wood, if             | no   | 1.11           |
| SW.466 | necessary. Supply and install stainless steel hex bolts of diameter 12mm, with nuts and washers & shank length 16mm including holes in metal or wood, if             | no   | 1.45           |
| SW.467 | necessary. Supply and install stainless steel hex bolts of diameter 12mm, with nuts and washers & shank length 20mm including holes in metal or wood, if             | no   | 1.45           |
| SW.468 | necessary. Supply and install stainless steel hex bolts of diameter 12mm, with nuts and washers & shank length 25mm including holes in metal or wood, if             | no   | 1.45           |
| SW.469 | necessary. Supply and install stainless steel hex bolts of diameter 12mm, with nuts and washers & shank length 30mm including holes in metal or wood, if             | no   | 1.53           |
| SW.470 | necessary. Supply and install stainless steel hex bolts of diameter 12mm, with nuts and washers & shank length 40mm including holes in metal or wood, if             | no   | 1.53           |
| SW.471 | necessary.  Supply and install stainless steel hex bolts of diameter 12mm, with nuts and washers & shank length 45mm including holes in metal or wood, if necessary. | no   | 1.62           |

| S/No   | Description                                                                                                                                                                                                                        | Unit | Unit Cost (\$) |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| SW.472 | Supply and install stainless steel hex bolts of diameter 12mm, with nuts and washers & shank length 50mm including holes in metal or wood, if necessary.                                                                           | no   | 1.62           |
| SW.473 | 5 mm dia raw bolt loose type or other equal and approved retraction bolt of length 50mm with nut and washer & shield length with nut 36mm including drilling holes in concrete, brickwork, metal or wood as required.              | no   | 2.55           |
| SW.474 | 6 mm dia raw bolt loose type or other equal and approved retraction bolt of length 65mm with nut and washer & shield length with nut 46mm including drilling holes in concrete, brickwork, metal or wood as required.              | no   | 2.89           |
| SW.475 | 6 mm dia raw bolt loose type or other equal and approved retraction bolt of length 75mm with nut and washer & shield length with nut 46mm including drilling holes in concrete, brickwork, metal or wood as required.              | no   | 2.64           |
| SW.476 | 6 mm dia raw bolt loose type or other equal and approved retraction bolt of length 115mm with nut and washer & shield length with nut 46mm including drilling holes in concrete, brickwork, metal or wood as required.             | no   | 3.49           |
| SW.477 | 8 mm dia raw bolt loose type or other equal and approved retraction bolt of length 75mm with nut and washer & shield length with nut 52mm including drilling holes in concrete, brickwork, metal or wood as required.              | no   | 2.98           |
| SW.478 | 8 mm dia raw bolt loose type or other equal and approved retraction bolt of length 100mm with nut and washer & shield length with nut 52mm including drilling holes in concrete, brickwork, metal or wood as required.             | no   | 3.57           |
| SW.479 | 10 mm dia raw bolt loose type or other equal and approved retraction bolt of length 85mm with nut and washer & shield length with nut 62mm including drilling holes in concrete, brickwork, metal or wood as required.             | no   | 3.15           |
| SW.480 | 10 mm dia raw bolt loose type or other equal and approved retraction bolt of length 110mm with nut and washer & shield length with nut 62mm including drilling holes in concrete, brickwork, metal or wood as                      | no   | 3.74           |
| SW.481 | required.  10 mm dia raw bolt loose type or other equal and approved retraction bolt of length 130mm with nut and washer & shield length with nut 62mm including drilling holes in concrete, brickwork, metal or wood as           | no   | 4              |
| SW.482 | required.  10 mm dia raw bolt loose type or other equal and approved retraction bolt of length 110mm with nut and washer & shield length with nut 78mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 4              |
| SW.483 | 10 mm dia raw bolt loose type or other equal and approved retraction bolt of length 130mm with nut and washer & shield length with nut 78mm including drilling holes in concrete, brickwork, metal or wood as required.            | no   | 4.08           |
| SW.484 | 12 mm dia raw bolt loose type or other equal and approved retraction bolt of length 95mm with nut and washer & shield length with nut 72mm including drilling holes in concrete, brickwork, metal or wood as required.             | no   | 4.76           |
| SW.485 | 12 mm dia raw bolt loose type or other equal and approved retraction bolt of length 120mm with nut and washer & shield length with nut 72mm including drilling holes in concrete, brickwork, metal or wood as required.            | no   | 5.1            |
| SW.486 | 12 mm dia raw bolt loose type or other equal and approved retraction bolt of length 120mm with nut and washer & shield length with nut 96mm including drilling holes in concrete, brickwork, metal or wood as required.            | no   | 5.95           |

| S/No   | Description                                                                                                                                                                                                              | Unit | Unit Cost (\$) |
|--------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| SW.487 | 12 mm dia raw bolt loose type or other equal and approved retraction bolt of length 185mm with nut and washer & shield length with nut 96mm including drilling holes in concrete, brickwork, metal or wood as required.  | no   | 6.46           |
| SW.488 | 16 mm dia raw bolt loose type or other equal and approved retraction bolt of length 130mm with nut and washer & shield length with nut 110mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 8.08           |
| SW.489 | 16 mm dia raw bolt loose type or other equal and approved retraction bolt of length 140mm with nut and washer & shield length with nut 110mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 8.16           |
| SW.490 | 16 mm dia raw bolt loose type or other equal and approved retraction bolt of length 160mm with nut and washer & shield length with nut 110mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 8.5            |
| SW.491 | 16 mm dia raw bolt loose type or other equal and approved retraction bolt of length 210mm with nut and washer & shield length with nut 110mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 10.03          |
| SW.492 | 16 mm dia raw bolt loose type or other equal and approved retraction bolt of length 210mm with nut and washer & shield length with nut 158mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 11.31          |
| SW.493 | 20 mm dia raw bolt loose type or other equal and approved retraction bolt of length 165mm with nut and washer & shield length with nut 130mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 11.31          |
| SW.494 | 20 mm dia raw bolt loose type or other equal and approved retraction bolt of length 185mm with nut and washer & shield length with nut 130mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 11.31          |
| SW.495 | 25 mm dia raw bolt loose type or other equal and approved retraction bolt of length 260mm with nut and washer & shield length with nut 180mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 19.72          |
| SW.496 | 25 mm dia raw bolt loose type or other equal and approved retraction bolt of length 310mm with nut and washer & shield length with nut 180mm including drilling holes in concrete, brickwork, metal or wood as required. | no   | 21.76          |
| SW.497 | HILTI' drive pins or other equal and approved type to fix timber, sheet metal etc to concrete w/ 3.7 mm dia shank of length 10mm to 27mm.                                                                                | no   | 0.43           |
| SW.498 | HILTI' drive pins or other equal and approved type to fix timber, sheet metal etc to concrete w/ 3.7 mm dia shank of length 32mm to 47mm.                                                                                | no   | 0.43           |
| SW.499 | HILTI' drive pins or other equal and approved type to fix timber, sheet metal etc to concrete w/ 3.7mm dia shank of length 52mm to 72mm.                                                                                 | no   | 0.6            |
| SW.500 | HILTI' drive pins or other equal and approved type to fix timber, sheet metal etc to concrete w/ 3.7 mm dia shank of length 82mm to 117mm.                                                                               | no   | 0.85           |
| SW.501 | HILTI' drive pins or other equal and approved type to fix timber, sheet metal etc to structural steel w/ 3.7 mm dia shank of length 14mm to 19mm.                                                                        | no   | 0.43           |
| SW.502 | HILTI' drive pins or other equal and approved type to fix timber, sheet metal etc to structural steel w/ 3.7 mm dia shank of length 22mm to 37mm.                                                                        | no   | 0.43           |

| S/No   | Description                                                                                                                                                                                                                                                                                 | Unit | Unit Cost (\$) |
|--------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| SW.503 | HILTI' drive pins or other equal and approved type to fix timber, sheet metal etc to structural steel w/ 3.7 mm dia shank of length 42mm to 62mm.                                                                                                                                           | no   | 0.6            |
| SW.504 | 5mm diameter hole 'HILTI' LB punched steel band or other equal and approved type to hang or secure pipes, ducts, etc.                                                                                                                                                                       | no   | 2.13           |
| SW.505 | 7mm diameter hole 'HILTI' LB punched steel band or other equal and approved type to hang or secure pipes, ducts, etc.                                                                                                                                                                       | no   | 2.98           |
| SW.506 | 8mm diameter hole 'HILTI' LB punched steel band or other equal and approved type to hang or secure pipes, ducts, etc.                                                                                                                                                                       | no   | 3.49           |
| SW.507 | 50mm x 50mm x 6mm thick mild steel angle arris protective guard 1.00m high, set flush to brick or concrete surface with 2 Nos. of 25mm x 3mm x 225mm long fixing lugs grouted into mortices with cement mortar (1:3).                                                                       | no   | 8.16           |
| SW.508 | Supply and fix 150mm diameter mild steel tubular bollard 1.20m from ground level including embedding 300mm in concrete foundation including painting with one coat of inhibitive primer and two coats of aluminium/synethic enamel paint (concrete foundation measured separately).         | no   | 51             |
| SW.509 | Standard design basketball stand c/w timber board, metal ring to receive basketball net, three coats of enamel paint, concrete (Grade 20) foundation, including all necessary excavation, formwork, removing debris off site breaking existing concrete surface, etc (Rate per set 2 Nos.). | set  | 2040           |
| SW.510 | Supply & deliver 3.18mm (1/8 inch) link dia galv chain link.                                                                                                                                                                                                                                | m    | 1.53           |
| SW.511 | Supply & deliver 3.97mm (5/32 inch) link dia galv chain link.                                                                                                                                                                                                                               | m    | 1.62           |
| SW.512 | Supply & deliver 4.76mm (3/16 inch) link dia galv chain link.                                                                                                                                                                                                                               | m    | 1.62           |
| SW.513 | Supply & deliver 6.35mm (1/4 inch) link dia galv chain link.                                                                                                                                                                                                                                | m    | 2.38           |
| SW.514 | Supply & deliver 7.94mm (5/16 inch) link dia galv chain link.                                                                                                                                                                                                                               | m    | 3.91           |
| SW.515 | Supply & deliver 9.53mm (3/8 inch) link dia galv chain link.                                                                                                                                                                                                                                | m    | 5.61           |
| SW.516 | Supply and deliver 3.18 mm (1/8 inch) link dia stainless steel chain link                                                                                                                                                                                                                   | m    | 5.27           |
| SW.517 | Supply and deliver 3.97mm (5/32 inch) link dia stainless steel chain link                                                                                                                                                                                                                   | m    | 7.31           |
| SW.518 | Supply and deliver 4.76mm (3/16 inch) link dia stainless steel chain link                                                                                                                                                                                                                   | m    | 8.59           |
| SW.519 | Supply and deliver 6.35mm (1/4 inch) link dia stainless steel chain link                                                                                                                                                                                                                    | m    | 9.95           |
| SW.520 | Supply and deliver 7.94mm (5/16 inch) link dia stainless steel chain link                                                                                                                                                                                                                   | m    | 13.26          |
| SW.521 | Supply and deliver 9.53mm (3/8 inch) link dia stainless steel chain link.                                                                                                                                                                                                                   | m    | 17.26          |
| SW.522 | Supply labour and material for cutting or welding locks, hinges, bolt, etc in replacement (Ironmongery and cutting or welding apparatus measured separately).                                                                                                                               | no   | 5.61           |
| SW.523 | Remove existing strong room steel security door (not more than 300kg) complete, transport and deliver to store or remove off site, including breaking up walls, remove debris off site and making good work disturbed.                                                                      | no   | 1224           |

| S/No   | Description                                                                                                                                                                                                | Unit | Unit Cost (\$) |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| SW.524 | Labour and material for cutting openings (any size) in weldmesh (any mesh and gauge) and including filling out ends smooth. (Cutting apparatus measured separately).                                       | no   | 3.66           |
| SW.525 | Mild steel dowels not exceeding 12mm diameter x 150mm long fixed to foot of wood frames.                                                                                                                   | no   | 0.68           |
| SW.526 | 40mm x 3mm mild steel cramps 225mm girth once bent, one end split and fixed in brickwork and other end screwed to wood frame.                                                                              | no   | 0.85           |
| SW.527 | Mild steel straps (to fasten foot of wooden posts etc) not exceeding 50mm x 6mm x 600mm long holed for and including 2 numbers of steel bolts with nuts and washers including casting one end in concrete. | no   | 9.01           |
| SW.528 | 6mm thick mild steel shoe of purpose-made design (any size) for holding                                                                                                                                    | no   | 13.26          |
| SW.529 | timber purlins, rafters, joints, etc. Aluminium rivets to linings (Any size).                                                                                                                              | no   | 0.17           |
| SW.530 | Mild steel rag bolts (irrespective of size and lengths) with nuts and washers including temporary boxing to form holes, building in and grouting.                                                          | kg   | 6.12           |
| SW.531 | Labour for removing mild steel brackets, plugs, from wall and make good work disturbed.                                                                                                                    | no   | 3.06           |
| SW.532 | Supply labour and all necessary equipment for argon welding to stainless steel ware.                                                                                                                       | m    | 38.76          |
| SW.533 | Supply and install 5mm dia galvanised eye or hook c/w extension bolt.                                                                                                                                      | no   | 2.04           |
| SW.534 | Supply and install 6mm dia galvanised eye or hook c/w extension bolt.                                                                                                                                      | no   | 2.64           |
| SW.535 | Supply and install 8mm dia galvanised eye or hook c/w extension bolt                                                                                                                                       | no   | 3.15           |
| SW.536 | Supply and install 10mm dia galvanised eye or hook c/w extension bolt.                                                                                                                                     | no   | 4.59           |
| SW.537 | Supply and install 5mm dia stainless steel eye or hook c/w extension bolt                                                                                                                                  | no   | 4.08           |
| SW.538 | Supply and install 6mm dia stainless steel eye or hook c/w extension bolt.                                                                                                                                 | no   | 5.27           |
| SW.539 | Supply and install 8mm dia stainless steel eye or hook c/w extension bolt                                                                                                                                  | no   | 6.29           |
| SW.540 | Supply and install 10mm dia stainless steel eye or hook c/w extension bolt.                                                                                                                                | no   | 9.18           |
| SW.541 | Supply and install 3mm dia stainless steel Dee shackle.                                                                                                                                                    | no   | 2.64           |
| SW.542 | Supply and install 4mm dia stainless steel Dee shackle.                                                                                                                                                    | no   | 2.72           |
| SW.543 | Supply and install 5mm dia stainless steel Dee shackle.                                                                                                                                                    | no   | 2.89           |
| SW.544 | Supply and install 6mm dia stainless steel Dee shackle                                                                                                                                                     | no   | 3.49           |
| SW.545 | Supply and install 8mm dia stainless steel Dee shackle                                                                                                                                                     | no   | 3.91           |
| SW.546 | Supply and install 10mm dia stainless steel Dee shackle.                                                                                                                                                   | no   | 4.59           |
| SW.547 | To remove any type and size of eye or hook, shackle, turnbuckle including make good affected surfaces to match the existing.                                                                               | no   | 2.55           |

|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| P.1  | Scape down and brush with stiff wire brush to remove all vegetable growth and contaminants, wash down with water and chlorox, allow to dry and make good damaged surfaces                                                                                                                                                                                                                                                    | sq m | 1.7            |
| P.2  | Burn off existing oil paint on concrete, brick, hollow block surfaces, or plastered surface, and make good damaged surfaces to receive new painting on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                       | sq m | 3.4            |
| P.3  | Prepare surfaces as specified, wash down with water and chlorox or other approved detergent to remove all vegetable growth, loose paintwork and other surface contaminants, allow to receive new painting on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall). | sq m | 1.7            |
| P.4  | Prepare surfaces as specified only to receive new painting (ie. exclude washing down) on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                     | sq m | 0.68           |

| S/No | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Unit | Unit Cost (\$) |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| P.5  | Prepare surfaces as specified, using high pressure water cleaner or other mechanical means to remove all existing paintwork to bare plaster and wash down all vegetable growths and other surface contaminants, allow to dry and make good damaged surfaces to receive new painting on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall). | sq m | 3.4            |
| P.6  | Mechanically grind down to remove all existing paintwork to bare plaster, wash down, allow to dry and prepare surfaces as specified to receive new painting on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                         | sq m | 3.83           |
| P.7  | Prepare and apply two (2) coats of anti-fungus solution on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                                                                             | sq m | 2.98           |
| P.8  | Prepare and apply two (2) coats of approved water repellent solution on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                                                                | sq m | 3.23           |
| P.9  | Prepare and apply one (1) coat of weathershield acrylic emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                                                              | sq m | 1.7            |
| P.10 | Prepare and apply one (1) base coat of cement paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                                                                                 | sq m | 1.36           |
| P.11 | Prepare and apply one (1) base coat 20% dilution of pure acrylic emulsion paint used for both interior and exterior decoration on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                      | sq m | 1.36           |
| P.12 | Prepare and apply one (1) undercoat of enamel paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                                                                                 | sq m | 2.13           |
| P.13 | Prepare and apply one (1) finishing coat of enamel paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                                                                            | sq m | 2.38           |
| P.14 | Prepare and apply two (2) finishing coat of enamel paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                                                                            | sq m | 3.83           |
| P.15 | Prepare and apply one (1) base coat of solvent base paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                                                                           | sq m | 2.13           |

| S/No | Description                                                                                                                                                                                                                                                                                                                                                                                                                                            | Unit | Unit Cost (\$) |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| P.16 | Prepare and apply one (1) base coat of high performance acrylic emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                      | sq m | 2.13           |
| P.17 | Prepare and apply one (1) coat of oil base wall sealer on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                              | sq m | 2.13           |
| P.18 | Prepare and apply one (1) coat of water base wall sealer on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                            | sq m | 1.28           |
| P.19 | Prepare and apply one (1) base coat of solvent borne acrylic sealer on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                 | sq m | 3.32           |
| P.20 | Prepare and apply one (1) base coat decorative coating on smooth surface on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                            | sq m | 2.55           |
| P.21 | Prepare and apply one (1) base coat decorative coating on rough surface on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                             | sq m | 4.68           |
| P.22 | Prepare as specified and apply one (1) coat of high performance thermoplastic acrylic resin paint, two (2) coats high performance acrylic rubber based paint and one (1) finishing coat of anti-fungi and anti-algae emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall). | sq m | 7.48           |
| P.23 | Prepare as specified and apply two (2) coats of vinyl silk emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                           | sq m | 2.98           |
| P.24 | Prepare as specified and apply one coat of vinyl silk emulsion paint.                                                                                                                                                                                                                                                                                                                                                                                  | sq m | 1.53           |
| P.25 | Prepare as specified and use texture roller to apply two (2) coats of vinyl silk emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                     | sq m | 2.98           |
| P.26 | Prepare and apply two (2) finishing coats of weather shield finished acrylic emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered                                                                                                                                                                                                                                                         | sq m | 3.23           |
| P.27 | surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                                                                                                                                                                                                                                                                        |      | 1.7            |
| P.28 | P&A one finishing coats of weather shield acrylic emulsion paint on existing concrete surfaces.                                                                                                                                                                                                                                                                                                                                                        | sq m | 3.4            |

| S/No | Description                                                                                                                                                                                                                                                                                                                                                     | Unit | Unit Cost (\$) |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| P.29 | Brush down and apply one (1) finishing coat of pure acrylic emulsion paint used for both interior and exterior decorations on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                   | sq m | 1.7            |
| P.30 | Apply two (2) finishing coats of pure acrylic emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                 | sq m | 0.68           |
| P.31 | Brush down and apply one (1) finishing coat of high performance acrylic emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                       | sq m | 3.4            |
| P.32 | Brush down and apply two (2) finishing coat of high performance acrylic emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                       | sq m | 3.83           |
| P.33 | Brush down and apply two(2) finishing coat of anti-fungus acrylic emulsion paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                             | sq m | 2.98           |
| P.34 | Prepare and appply one (1) coat of epoxy primer and one (1) finishing coat of polyurethane paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                             | sq m | 3.23           |
| P.35 | Prepare and appply one (1) coat of epoxy primer and two (2) finishing coat of polyurethane paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                             | sq m | 1.7            |
| P.36 | Brush down and apply one (1) finishing coat of cement paint on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                                  | sq m | 1.36           |
| P.37 | Brush down and apply one (1) coat polyurethane paint (2 pack system) on existing previously decorated/non decorated concrete, brick or hollow block surfaces, plastered surfaces, plain, perforated or grillled asbestos surfaces, precast concrete vents, etc (measured flat overall).                                                                         | sq m | 1.36           |
| P.38 | Prepare as specified and apply one (1) coat of cement paint on new concrete, brick or hollow block surfaces, plastered surfaces, new fibreboard surfaces, plain, perforated or precast concrete vents, etc (measured flat overall).                                                                                                                             | sq m | 2.13           |
| P.39 | Prepare as specified and apply one (1) base coat 20% dilution and one (1) undercoat and one (1) finishing coat of acrylic emulsion paint used for both interior and exterior decoration on new concrete, brick or hollow block surfaces, plastered surfaces, new fibreboard surfaces, plain, perforated or precast concrete vents, etc (measured flat overall). | sq m | 2.38           |
| P.40 | Prepare as specified and apply one (1) base coat 20% dilution of acrylic PVA Copolymer emulsion paint used for both interior and exterior decoration on new concrete, brick or hollow block surfaces.                                                                                                                                                           | sq m | 3.83           |

| S/No | Description                                                                                                                                                                                                                                                                                    | Unit | Unit Cost (\$) |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------|
| P.41 | Prepare as specified and apply one (1) base coat of solvent base paint on new concrete, brick or hollow block surfaces.                                                                                                                                                                        | sq m | 2.13           |
| P.42 | Prepare as specified and apply one (1) base coat of high performance acrylic emulsion paint on new concrete, brick or hollow block surfaces.                                                                                                                                                   | sq m | 2.13           |
| P.43 | Prepare as specified and apply one (1) coat of oil base wall sealer on new concrete, brick or hollow block surfaces.                                                                                                                                                                           | sq m | 2.13           |
| P.44 | Prepare as specified and apply one (1) coat of water base wall sealer on new concrete, brick or hollow block surfaces.                                                                                                                                                                         | sq m | 1.28           |
| P.45 | Prepare as specified and apply one (1) coat of solvent-borne acrylic sealer on new concrete, brick or hollow block surfaces.                                                                                                                                                                   | sq m | 3.32           |
| P.46 | Prepare and apply one (1) undercoat of enamel paint on new concrete, brick or hollow block surfaces.                                                                                                                                                                                           | sq m | 2.55           |
| P.47 | Prepare and apply one (1) finishing coat of enamel paint on new concrete, brick or hollow block surfaces.                                                                                                                                                                                      | sq m | 4.68           |
| P.48 | Prepare and apply two (2) finishing coat of enamel paint on new concrete, brick or hollow block surfaces.                                                                                                                                                                                      | sq m | 7.48           |
| P.49 | Prepare and apply one (1) coat of epoxy primer and one (1) finishing coat of polyurethane paint on new concrete, brick or hollow block surfaces.                                                                                                                                               | sq m | 2.98           |
| P.50 | Prepare and apply one (1) base coat of decorative coating on smooth surface on new concrete, brick or hollow block surfaces.                                                                                                                                                                   | sq m | 1.53           |
| P.51 | Prepare and apply one (1) base coat of decorative coating on rough surface on new concrete, brick or hollow block surfaces.                                                                                                                                                                    | sq m | 2.98           |
| P.52 | Brush down and apply one finishing coat of low polyamide epoxy coating (2 packs) system                                                                                                                                                                                                        | sq m | 3.23           |
| P.53 | Brush down and apply one finishing coat of high-build epoxy coating                                                                                                                                                                                                                            | sq m | 1.7            |
| P.54 | Brush down and apply 2 coats of epoxy chemical resistant finishing paint                                                                                                                                                                                                                       | sq m | 3.4            |
| P.55 | Prepare new surfaces as specified on new concrete, brick or hollow block surfaces.                                                                                                                                                                                                             | sq m | 1.7            |
| P.56 | Apply one (1) coat of wood preservative on surfaces of sawn timber (all surfaces measured flat superficial)                                                                                                                                                                                    | sq m | 0.68           |
| P.57 | Apply two (2) coat of wood preservative on surfaces of sawn timber (all surfaces measured flat superficial)                                                                                                                                                                                    | sq m | 3.4            |
| P.58 | Apply one (1) coat of wood preservative on surfaces of wrot woodwork (all surfaces measured flat superficial)                                                                                                                                                                                  | sq m | 3.83           |
| P.59 | Apply two (2) coat of wood preservative on surfaces of wrot woodwork (all surfaces measured flat superficial)                                                                                                                                                                                  | sq m | 2.98           |
| P.60 | Knot, stop, sand and apply one (1) coat wood primer on general surfaces of chicks, flush, panelled or louvred door/windows,fitments, partitious including frames, mullions and transomes (measured flat overall between external edges of frames or external edges of doors and windows).      | sq m | 3.23           |
| P.61 | Knot, stop, sand and apply one (1) coat wood primer on general surfaces of wooden trelliswork (measured flat overall between external edges of frames)                                                                                                                                         | sq m | 1.7            |
| P.62 | Knot, stop, sand and apply one (1) coat wood primer on general surfaces of panelled windows, panelled doors, fanlights, partitions including frames, mullions and transomes, all panels glazed (Measured flat overall between external edges of frames or external edges of doors and windows) | sq m | 1.36           |
| P.63 | Knot, stop, sand and apply one (1) coat wood primer on general surfaces of panelled windows, panelled doors, fanlights, partitions including frames, mullions and transomes, with one panel glazed (Measured flat overall                                                                      | sq m | 1.36           |

| 73   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 144.5          |
|      | taper lock pulley (complete with bush and max bore) including                                                                                           |      |                |
|      | aligning and commissioning the system for single A groove pulley up to SPA 180 x 1                                                                      |      |                |
| 74   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 153            |
|      | taper lock pulley (complete with bush and max bore) including aligning and commissioning the system for single A groove pulley up to SPA 200 x 1        |      |                |
| 75   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 144.5          |
|      | taper lock pulley (complete with bush and max bore) including aligning and commissioning the system for single B groove pulley up to SPB 150 x 1        |      |                |
| 76   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 178.5          |
|      | taper lock pulley (complete with bush and max bore) including aligning and commissioning the system for single B groove pulley up to SPB 190 $\times$ 1 |      |                |
| 77   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 212.5          |
|      | taper lock pulley (complete with bush and max bore) including aligning and commissioning the system for single B groove pulley up to SPB 250 x 1        |      |                |
| 78   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 170            |
|      | taper lock pulley (complete with bush and max bore) including aligning and commissioning the system for double B groove pulley up to SPB 140 x 2        |      |                |
| 79   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 178.5          |
|      | taper lock pulley (complete with bush and max bore) including aligning and commissioning the system for double B groove pulley up to SPB 180 x 2        |      |                |
| 80   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 195.5          |
|      | taper lock pulley (complete with bush and max bore) including aligning and commissioning the system for double B groove pulley up to SPB 140 x 2        |      |                |
| 81   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 204            |
|      | taper lock pulley (complete with bush and max bore) including aligning and commissioning the system for double B groove pulley up to SPB 200 x 2        |      |                |
| 82   | To supply all labour, materials. transport and tools to replace/install                                                                                 | no   | 229.5          |
|      | taper lock pulley (complete with bush and max bore) including aligning and commissioning the system for double B groove pulley up to SPB 250 x 2        |      |                |

| S/No | Description                                                                                               | Unit | Unit Cost (\$) |
|------|-----------------------------------------------------------------------------------------------------------|------|----------------|
| 83   | To supply and replace permanent washable air filter mats with 85%                                         | no   | 5.1            |
|      | efficiency without filter frame. Total surface area up to 0.2 sq.m                                        |      |                |
| 84   | To supply and replace permanent washable air filter mats with 85%                                         | no   | 11.05          |
|      |                                                                                                           |      |                |
|      | efficiency complete with filter frame thickness up to 4mm. Total                                          |      |                |
| 85   | surface area up to 0.2 sq m  To supply and replace permanent washable air filter mats with 85%            | no   | 20.4           |
|      | To supply and replace permanent washable an inter-mats with 65%                                           |      | 20.4           |

| 246  | Supply and install Daikin/ Mitsubishi/ Toshiba or equivalent 1 x 9,000                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | set  | 1997.5         |
| 247  | Btuh and 1 x 12,000 Btuh fan coil units wall type multi-split airconditioner. The rates mentioned herein shall include all wiring, PVC trunking, refrigerant, pipe works and insulation, stainless steel bracket or cement casting for condensing unit, testing and commissioning of air-cooled multi/ single split air-conditioning unit with minimum gross cooling capacity not less than what is specific. Inclusive of one (1) year warranty for entire system & six (6) two monthly servicing, dismantling the existing air- con system and make good to disturbed area if any. The complete new set of the split air-conditioning unit (condensing and fan coil units c/w wireless/ wire remote control with drainage).  Supply and install Daikin/ Mitsubishi/ Toshiba or equivalent 12,000                  | set  | 2125           |
| 248  | Btuh x 2 fan coil units wall type multi-split air-conditioner. The rates mentioned herein shall include all wiring, PVC trunking, refrigerant, pipe works and insulation, stainless steel bracket or cement casting for condensing unit, testing and commissioning of air-cooled multi/single split air-conditioning unit with minimum gross cooling capacity not less than what is specific. Inclusive of one (1) year warranty for entire system & six (6) two monthly servicing, dismantling the existing air- con system and make good to disturbed area if any. The complete new set of the split air-conditioning unit (condensing and fan coil units c/w wireless/ wire remote control with drainage).  To supply and install Daikin/ Mitsubishi/ Toshiba or equivalent                                      | set  | 3570           |
| 249  | capacity of up to 36,500 Btuh ducted type split unit air-conditioner. The rate herein shall include all wiring, starter panel, PVC trunking, refrigerant, pipe works and insulation, stainless steel bracket or cement casting for condensing unit, testing and commissioning of air-cooled multi/ single split air-conditioning unit with minimum gross cooling capacity not less than what is specific (cost exclude duct works). Inclusive of one (1) year warranty for entire system & six (6) two monthly servicing, dismantling the existing air-con system and make good to disturbed area if any. The complete new set of the split air-conditioning unit (condensing and fan coil units c/w wireless/ wire remote control with drainage).  To supply and install Daikin/ Mitsubishi/ Toshiba or equivalent | set  | 4479.5         |
|      | capacity of up to 36,600 Btuh to 48,000 Btuh ducted type split unit air-conditioner. The rate herein shall include all wiring, starter panel, PVC trunking, refrigerant, pipe works and insulation, stainless steel bracket or cement casting for condensing unit, testing and commissioning of air-cooled multi/ single split air-conditioning unit with minimum gross cooling capacity not less than what is specific (cost exclude duct works). Inclusive of one (1) year warranty for entire system & six (6) two monthly servicing, dismantling the existing air-con system and make good to disturbed area if any. The complete new set of the split air- conditioning unit (condensing and                                                                                                                   |      |                |
